

SYMPOSIUM IN ANALYSIS - JUNE 16-17, 1967

A symposium on topics in Analysis related to Measure Theory, Function Spaces, Ergodic Theory and Harmonic Analysis sponsored by the Mathematics Department of Queen's University, Kingston, Ontario, will be held on June 16-17, 1967. All interested mathematicians are invited to attend. Invited one hour addresses will be given by the following:

- N. Dinculeanu - Integral representations of linear operators.
- Edwin Hewitt - A certain Banach algebra of functions on a compact group.
- A. Ionescu Tulcea - On the lifting property.
- W. A. J. Luxemburg - Normed Riesz Spaces of measurable functions.
- Laurent Schwartz - Expects to participate and will speak on a subject to be announced.

There will be sessions for ten minute contributed papers in topics related to Analysis. If the time available does not permit the presentation of all papers submitted, the remainder will be read by title. Abstracts must be received by June 1, 1967.

This Symposium is made possible by a grant to the Mathematics Department of Queen's University by DuPont of Canada, Ltd.
