BJPsych Open S141

Managers, 4 x Band 5 nurses and 4 x Assistant Practitioners. The respondents were distributed equally across the three general adult wards and the PICU. All 23 members of staff provided a score of 10 out 10 to the question about how happy they were to have a PA working on the ward. Many of the staff members provided some very positive comments on their respective views about the role of the PA at Clock View Hospital. No negative comments were provided by any members of staff.

Conclusion. It is clear from the large sample of members of staff of different grade at Clock View Hospital that were surveyed that the PA has been a warmly received and welcome addition to the inpatient team and that the PA is viewed as having become an important and valued member of the inpatient team. This provides a strong argument for both Mersey Care NHS Foundation Trust, and other mental health trusts across the U.K., to consider employing more PAs to work in their inpatient units.

Innovative psychiatry medical education initiative: empowering and supervising trainees for future teaching in psychiatry training program establishment in Somaliland

Jibril Handuleh^{1*}, Victor Periera-Sanchez MD² and Daniel Fekadu Wolde-Giorgis³

¹Lecturer in Psychiatry, Amoud University School of Medicine, Psychiatry resident, Saint Paul's Hospital Millennium Medical College; ²Child and Adolescent Psychiatry fellow NYU Grossman School of Medicine, Visiting lecturer in psychiatry, Amoud University School of Medicine and ³Head of department, Visiting Professor of psychiatry, Amoud University School of Medicine, Lecturer in Psychiatry, Institute of Psychiatry, Neurology and Psychology, King's College London

doi: 10.1192/bjo.2021.400

Aims. Somaliland is a de facto state in the horn of Africa. It unilaterally declared independence from rest of Somalia in 1991. Medical education in Somaliland started in the year 2000.

Aim of the study is to explore the feasibility of teaching program for the country by its future potential psychiatry educators. The initiative started in 2019 to seek trainees with interest in academic psychiatry and support them with medical education skills. This is intended to prepare them for leading future teaching roles in both undergraduate and residency/fellowship in psychiatry

Amoud University wanted to empower junior doctors at the university to have teaching skills needed to set up residency program. The Somaliland government asked Ethiopian ministry of health to offer psychiatry residency program for general practitioners in Somaliland to have future residency and fellowship in psychiatry. Several psychiatry trainees worked with the visiting professor from the United Kingdom who joined Somaliland medical school as visiting professor in psychiatry

Method. The visiting professor supported the trainee in setting up a psychiatry undergraduate training curriculum in line with Somaliland medical school curriculum. Before the teaching methods were didactic and role play based. The faculty introduced different teaching methods including flipchart, small/large group teaching which was student centered education. Students received a online survey to reflect on psychiatry teaching they received post course survey was conducted at the end of the teaching to evaluate the teaching initiative.

Result. Survey revealed interesting pattern that students preferred class room based teaching in comparison to online teaching. 90

percent of the attendees showed interest in flipchart teaching compared to didactic model. They expressed increasing understanding of the subject matter when they read and discuss among themselves instead of lectures. 70% of students prefer more clinical teaching compared to online sessions.

52% liked the new teaching module compared to the lecturing sytle.

Conclusion. Supervision of early career psychiatrists to undertake future academic psychiatry roles is an important step in building psychiatry faculty in medical schools. As the case of Somaliland this retains trainees in teaching roles in the future to teach undergraduates mental health courses. The other benefit is empowering them to set up psychiatry training program to close the service delivery gap with skilled psychiatrists in the future. Somaliland plans to set up its psychiatry residency/fellowship programs soon after this initiative.

Core psychiatry trainees views on MRCPsych course structure and delivery at East Midlands Deanery

Asma Javed^{1*}, Hetal Acharya¹ and Ian Yanson²

¹Leicestershire partnership NHS Trust and ²Rampton Hospital *Corresponding author.

doi: 10.1192/bjo.2021.401

Aims. The RCPsych curriculum for core training in Psychiatry (2013) requires each Deanery to run regional MRCPsych teaching programme.

The East Midlands School of Psychiatry run a local MRCPsych course aimed at all core psychiatry trainees in the deanery. Before the pandemic, the course took place between two venues – Nottingham and Leicester. During the pandemic, the course was delivered via Microsoft teams. We aimed to collect the feedback from trainees regarding the course to help shape the MRCPsych Course programme according to their training needs. **Method.** We devised an online Microsoft forms questionnaire which included:

Level of training

Number of exams passed

Relevance of MRCPsych content to clinical practice and membership exam

Usefulness of mock exams, simulation scenarios and workshops towards clinical and exam practice

Overall experience of the course

Which additional sessions they would like to be included The effect of COVID-19 on their ability to attend in MRCPsych programme

These forms were sent to all the trainees in the region via email.

Result. Out of 44 trainees, 9 responded. 66.6% of the trainees who responded were CT1 and 33.3% CT2. 45% had passed Paper A and 55% had not passed any exams. 78% of them agreed and 11% strongly agreed that course was relevant to the clinical practice. 55.6% agreed that course was relevant to membership course. 44.4% agreed and 11% strongly agreed that mock exams were useful. 66.7% agreed and 11% strongly agreed that simulation case scenarios and workshops were useful for exam and clinical practice. 22.2% strongly agreed and 33.3% agreed that sessions were engaging and motivating. Overall experience of MRCPsych exam was rated as excellent (11%), good (55%), satisfactory (22%) and poor (11%).

Suggestions to add additional sessions included antiracism in psychiatry, more mock exams, practical management of cases, to organise more interactive sessions on Microsoft teams,
