ELIXIR GABAIL

(BROMO-VALERIANATE)

The Ideal Sedative in all Nervous Affections

Elixir Gabail combines the sedative action of Bromide and Chloral Hydrate with the nervine and anti-spasmodic deodorised Valerianate. Pharmaceutically it is as pleasant and palatable as it is efficacious from the therapeutic standpoint, the disagreeable odour and flavour of the Valerian having been completely removed without in any way impairing its therapeutic value.

In Hysteria and Psychasthenia it relieves nervous excitement and produces a calm state of mind that is conducive to rapid recovery. It is also of value in states of temporary emotional excitement, in Hypochondriasis and Melancholia.

Dosage : One tablespoonful in water twice or thrice daily. As a hypnotic: two tablespoonfuls in water at bedtime.

Supplied in bottles of 187 c.c. and in bulk for Hospital use.

Literature and Samples on request.

The Psycho-Somatic Approach

MODERN medicine recognizes that mild depressions are frequently responsible for vague functional ailments which are none the less real because they have no demonstrable organic basis. The physical manifestations of such depressive states are amazingly varied. The first therapeutic objective may well be the elimination of the underlying psychoneurosis, and 'Benzedrine' Tablets, with their strikingly beneficial effect on mood, will often accomplish this aim by producing a marked increase in mental alertness, energy, and ability to endure prolonged physical or mental strain.
