Just In Time: Empowering the Public to Save Lives

Eric Goralnick MD, MS

Mass General Brigham/Harvard Medical School, Boston, MA, USA

Abstract

Each year, disasters impact over 50 million, and conflicts are indirectly related to 1,000,000 deaths. Traditionally, humanitarians help in two ways: Deployment: sending healthcare workers to provide direct care, and Development: training local healthcare workers. But these routes limit who can be reached and how quickly. We envision a scalable solution that moves beyond traditional humanitarian avenues to empower the public to save lives and reduce suffering through equitable, open-access education.

Learning Objectives: Provide the justification for just in time digital education. Provide various examples of JIT education. Summarize current JIT domestic and global initiatives.
