The geometric figure on the cover, a four-dimensional polytope, was redrawn from the inside cover page of the celebrated book 'Regular Polytopes' by Harold Scott MacDonald Coxeter (1907–2003), one of the greatest geometers of the 20th century. Coxeter, a Fellow of the Royal Society of Canada and a Fellow of the Royal Society (London), joined the University of Toronto in 1936 and worked there enthusiastically for 60 years. Since 1978, the Canadian Mathematical Society has awarded the Coxeter-James Prize in his honor.

La figure géométrique sur la couverture, un polytope en dimension quatre, a été reprise du plat intérieur du célèbre ouvrage Regular Polytopes de Harold Scott MacDonald Coxeter (1907–2003), l'un des plus grands géomètres du XXe siècle. Membre de la Société royale du Canada et de la Royal Society (Londres), H.M.S. Coxeter s'est joint au corps professoral de l'Université de Toronto en 1936, où il a travaillé avec enthousiasme pendant 60 ans. Depuis 1978, la Société mathématique du Canada décerne le prix Coxeter-James en son honneur.

1	Spaces of knotted circles and exotic smooth structures	<i>Gregory Arone and Markus Szymik</i>
24	On a family of torsional creep problems in Finsler metrics	<i>Maria Fărcașeanu, Mihai Mihăilescu, and Denisa Stancu-Dumitru</i>
42	Möbius automorphisms of surfaces with many circles	<i>Niels Lubbes</i>
72	Action convergence of operators and graphs	<i>Ágnes Backhausz and Balázs Szegedy</i>
122	Fourier coefficients of minimal and next-to-minimal automorphic representations of simply-laced groups	<i>Dmitry Gourevitch, Henrik P. A. Gustafsson, Axel Kleinschmidt, Daniel Persson, and Siddhartha Sahi</i>
170	Some complexity results in the theory of normal numbers	<i>Dylan Airey, Steve Jackson, and Bill Mance</i>
199	Tropical geometry and Newton–Okounkov cones for Grassmannian of planes from compactifications	<i>Christopher Manon and Jihyeon Jessie Yang</i>
232	Densities in certain three-way prime number races	<i>Jiawei Lin and Greg Martin</i>
266	Divisibility of torsion subgroups of abelian surfaces over number fields	<i>John Cullinan and Jeffrey Yelton</i>
