On page 245, lines 3 and 4, of the published paper, we find the following text:

"Since tr  $\{U_d\Gamma\}$  can be expressed as the trace of the product of two positive definite matrices, tr  $\{U_d\Gamma\} > 0$ , and thus  $c_d > 0$ ;"

This text should be replaced with:

"Since tr  $\{U_d\Gamma\}$  can be expressed as the trace of a positive definite matrix, tr  $\{U_d\Gamma\} > 0$ , and thus  $c_d > 0$ ;"

The uncorrected text claims that  $U_d$  and  $\Gamma$  are positive definite matrices, but  $U_d$  can't be positive definite, since its rank (difference between the ranks of the derivatives of the two models involved) is much less than its order.

The expression tr  $\{U_d\Gamma\}$  could be written differently so that the conclusion still holds. Namely, write  $U_d = V\Pi P^{-1}A'(AP^{-1}A')^{-1}AP^{-1}\Pi'V$  (formula (4) of the paper) as  $U_d = FF'$ , where  $F = V\Pi P^{-1}A'(AP^{-1}A')^{-1/2}$ ; then, tr  $\{U_d\Gamma\} = \text{tr} \{FF'\Gamma\}$  where  $F'\Gamma F$  is a positive definite matrix, given that  $\Gamma$  is positive definite in the setup of the paper.

For rewriting the alternative expression of tr  $\{U_d\Gamma\}$ , we used the well-known matrix algebra result that tr  $\{MN\}$  = tr  $\{NM\}$  for matrices M and N of dimensions conformable with the products; in our application, M = F and  $N = F'\Gamma$ .
