

SUBJECT INDEX

accreting		burst	
— neutron star	207, 229	X-ray —	207, 219, 229
— star	192	burster	
— white dwarf	191	rapid —	220
accretion		carbon deflagration	300, 309
— disk	235	carbon detonation	300
— onto magnetized		chromosphere	
neutron star	233	hot —	94
thermal history of		circulation	239
—	193	Eddington-Vogt —	238
ambipolar diffusion	35, 50, 63	— in surface-near	
angular momentum		region	245
diffusion of —	13	cloud	
— loss	181	collapsing —	9, 15, 41, 103
— problem	9, 46	dense interstellar	
specific —	8	—	65
— transport	105	dense molecular —	9
angular velocity	238, 247,	interstellar —	36
distribution	250	interstellar CO —	72
binary		isothermal gas —	107
close —	76, 111,	massive dark —	8
	137, 179	massive interstellar	
close — of		—	70
moderate mass	144	self-gravitating —	41
contact —	181	collapse	
evolution of close		accretion-induced	
—	158	core —	169
formation of —		criteria for —	41
star	75	— of dense core	322
long period —	76	general relativistic	
low-mass X-ray —	159	—	326
massive close —	139	— of magnetic cloud	44
massive X-ray —	141, 158	collapsing cloud	9, 15, 41, 103
— pulsar	156, 159,	compact	
	169	— object in binary	
scenario of close	138, 139,	system	155
— evolution	144	— star in binary	
— system	155	system	156
X-ray —	146	comptonized X-ray	
— X-ray pulsar	221	emission	235
black hole	326		
massive —	235		
blue stragglers	187		

- convection
 — and pulsational stability 278
 — zone 265
- corona
 outflowing — 93
- cyclotron line emission 233
- degenerate
 — C+O core 297
 — O+Ne+Mg core 297
- disk
 gas — 115
- dust grain
 growth and sedimentation of — 116, 131
- dynamo action 265
- Eddington-Vogt circulation 238
- equilibrium of rotating body 273
- evolution
 — of close binary 137, 158
 common-envelope — 165
 conservative — 163
 — of degenerate core 296
 early stages of stellar — 101
 non-conservative — 167, 183
 pre-main-sequence — 85
 quasi-conservative — 164, 168
 scenario of close binary — 138, 139, 144
 — toward core collapse 158
 — of very massive star 287
- fission 78, 109
- fragmentation 15, 28, 43, 80, 103, 107
 — of dust layer 117
- gamma-ray burst 222
- general relativistic
 — effect 218
 — polytrope 274
- globule 8
- Goldreich-Schubert-Fricke instability 241
- grain 65
- gravitational scattering 118
- gravitational wave
 radiation of — 144, 150, 185
- gravothermal specific heat 196
- horizontal-branch star 275, 284
- instability
 Goldreich-Schubert-Fricke — 241
 Jeans — 36
 magnetic Rayleigh-Taylor — 38
 Parker — 38
 thermal — 37, 72
- interstellar medium
 structure of — 73
- limit cycle 199
- magnetic braking 46, 129, 267
- magnetic field
 global consideration on — 258
 interstellar — 29, 34, 65
 — and stellar evolution 257
 — and stellar structure 260
- magnetic flux problem 50
- magnetic protostar 63
- maser
 Orion SiO — 100
- mass loss 87
- neutronization 320
- neutron star
 — cooling theories 231
 formation of — 326
 helium shell-burning on — 212
 nascent — 322
 rotating — 327
 surface layers of accreting — 211
- oblique rotator 263
- off-center
 — burning 299
 — dual detonation 306
- Orion
 — nebular stars 99
 — SiO maser 100
- planet 113

planet		star formation	5, 27, 68,
giant —	123, 133	— rate	72
planetesimal	118	stellar structure	73
pre-main-sequence	85	branches in the	
— evolution	111	solution of —	201
rotating — stars	87	supernova	285
primordial terrestrial	122, 124,	asymmetric —	
atmosphere	135	explosion	184
proto-earth	122	electron capture —	303
proto-star	105	progenitor of	285
— formation	66	quiet —	305
pulsar	166	— of Type I (SNI)	289, 305,
ring		—	310
— formation	15	— of Type II	285, 302,
— structure	11, 16	—	304
rotating		thermonuclear flash	209
— giant	177	— in helium-burning	
— polytrope	109, 274	shell	213
rotation	5, 179,	thermonuclear reaction	
differential —	273, 275	rate	317, 318
runaway stars	241	three-dimensional	
satellite	168	calculation	15
scenario	125	T Tauri stars	8, 91
— of close binary	138, 139	turbulent	
evolution	144	— convection	280
— for evolution of		— diffusion	281
close binary	144	— friction	105
shell flash	191, 229	— viscosity	249
— in accreting		two-dimensional	
neutron star	212	calculation	9
— in accreting star	192	WR star	142
— in red giant	192	X-ray	
recurrence of —	203	— burst	219, 229
solar nebula	13, 113,	— burst source	207
	115, 129,	fast — transient	221
	131	— and UV emission	
solar system		from accreting	
origin of —	113	degenerate dwarf	234
stability of stellar		X-ray binary	
magnetic field	260	two groups of —	157
