

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (robotica@cambridge.org) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **41** Part **7** July **2023**

Potential field-based dual heuristic programming for path-following and obstacle avoidance of wheeled mobile robots Yaoqian Peng, Xinglong Zhang, Haibin Xie and Xin Xu	1931
Path planning of patrol robot based on modified grey wolf optimizer Qian Zhang, Xucheng Ning, Yingying Li, Lei Pan, Rui Gao and Liyang Zhang	1947
Analytical expression of motion profiles with elliptic jerk Daniele Stretti, Pietro Fanghella, Giovanni Berselli and Luca Bruzzone	1976
Force tracking smooth adaptive admittance control in unknown environment Chengguo Liu and Zeyu Li	1991
Spring-balanced 3-DoF serial planar manipulators for constant forces in arbitrary directions Chia-Wei Juang, Chi-Shiun Jhuang and Dar-Zen Chen	2012
Design and validation of a novel adaptive motion control for a pendulum spherical robot Jianwen Huo, Rui Lin and Maotao Yang	2031
Tangential-force detection ability of three-axis fingernail-color sensor aided by CNN Keisuke Watanabe, Yandong Chen, Hiraku Komura and Masahiro Ohka	2050
Design and optimization of a decoupled serial constant force microgripper for force sensitive objects manipulation Ye Shan, Bingxiao Ding, Jianhua Zhong and Yangmin Li	2064
A comprehensive review of the latest path planning developments for multi-robot formation systems Nour Abujabal, Raouf Fareh, Saif Sinan, Mohammed Baziyad and Maamar Bettayeb	2079
Path-following and collision-avoidance guidance of unmanned sailboats based on beetle antennae search optimization Yingjie Deng, Tao Ni, Zhuxin Zhang and Jianwei Wang	2105
Projecting robot dynamics onto trajectories Friedrich Pfeiffer	2122
A unified modeling and trajectory planning method based on system manipulability for the operation process of the legged locomotion manipulation system Peng Kang, Haibin Meng and Wenfu Xu	2139
Based on human-like variable admittance control for human-robot collaborative motion Chengyun Wang and Jing Zhao	2155
Design, development, and analysis of the lower body of next-generation 3D-printed humanoid research platform: PANDORA Alexander J. Fuge, Connor W. Herron, Benjamin C. Beiter, Bhaben Kalita and Alexander Leonessa	2177
Gait optimization and energy-based stability for biped locomotion using large-scale programming Ye Xie, Chengzhi Gao, Shiqiang Zhu, Xufei Yan, Lingyu Kong, Anhuan Xie, Jason Gu and Dan Zhang	2207
Research status and development trend of frog-inspired robots Shuqi Wang, Jizhuang Fan and Gangfeng Liu	2228
Design and control of a cable-driven rehabilitation robot for upper and lower limbs – ERRATUM Efe Levent Oyman, Muhammed Yusuf Korkut, Cüneyt Yılmaz, Zeki Y. Bayraktaroglu and M. Selcuk Arslan	2249
