

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{T}\mathcal{E}\mathcal{X}$. (We accept Plain $\mathcal{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Convolution kernels of $(n + 1)$-fold Marcinkiewicz multipliers on the Heisenberg group A.J. Fraser	353
On entire solutions of a certain type of nonlinear differential equation Chung-Chun Yang	377
Hemivariational inequalities with the potential crossing the first eigenvalue Sophia Th. Kyritsi and Nikolaos S. Papageorgiou	381
On adequate links and homogeneous links Sang Youl Lee, Chan-Young Park and Myoungsoo Seo	395
Pseudoregular radical classes N.R. McConnell and T. Stokes	405
Maximal compact subgroups and the centre in an analytic group W.H. Previats and T.S. Wu	415
On the group of automorphisms of an analytic group W.H. Previats and T.S. Wu	423
Towards the fixed point property for superreflexive spaces Andrzej Wiśnicki	435
Integrable extended Hubbard models with boundary Kondo impurities Anthony J. Bracken, Xiang-Yu Ge, Mark D. Gould and Huan-Qiang Zhou	445
On recurrence relations for Bernoulli and Euler numbers Ching-Hua Chang and Chung-Wei Ha	469
A note on the interpolation of the Diffie-Hellman mapping Arne Winterhof	475
Sylow permutable subnormal subgroups of finite groups II A. Ballester-Bolinches and R. Esteban-Romero	479
On the injectivity of the Braid group in the Hecke algebra Gus I. Lehrer and Nanhua Xi	487
Short Amicable sets and Kharaghani type orthogonal designs Christos Koukouvinos and Jennifer Seberry	495
Strong Gröbner bases for polynomials over a principal ideal ring Graham H. Norton and Ana Sălăgean	505
