
INSTRUCTIONS TO CONTRIBUTORS

The *Journal of Helminthology* publishes papers on all aspects of animal parasitic helminths, particularly those of medical or veterinary importance, but only in exceptional circumstances will systematic or taxonomic studies be acceptable.

Manuscripts, which must be in English or French (with an English summary) should be accompanied by a letter signed by *all* the authors and should be addressed to:

The Editors, Journal of Helminthology,
London School of Hygiene and Tropical Medicine,
395A Hatfield Road,
St Albans, Herts AL4 0XQ.
England.

Three copies of a typescript, on size A4 paper with double spacing, should be submitted. Papers should be preceded by a short abstract and will normally have the following sections: brief Introduction; Materials and Methods; Results; Discussion; Acknowledgements; References. However, the form of the paper may vary, depending on its subject matter; recent past issues should be consulted for a suitable form. Research Notes should also be preceded by a brief abstract. Illustrations should be drawn in Indian ink, preferably not more than double the final size. Care should be taken that all illustrations fit into the format of the Journal. The maximum size an illustration will be printed is 12.0×20.0 cm. Where many separate drawings are made, some indication of how they may be grouped to make a corporate plate without undue wastage of space, should be indicated. Some indication of scale (preferably a scale bar) should normally be given on the figure. Photocopies of illustrations should be enclosed for refereeing purposes. Lettering and numbering, which must be of a high standard, should be added by the author, with due regard for subsequent reduction.

Photographs should be glossy prints of the same size as they are to appear in the Journal (maximum size 12.0×20.0 cm). Composite prints must be mounted and can have the separate photographs abutting; they will then have a separating line inserted by the printers. All figures and letters on photographs must be inserted by the author.

Information should not be repeated in the text and in tables or figures. The legends to tables and to figures should be sufficiently detailed for the information to be understood without reference to the text.

References should be given in alphabetical order with the full title of the journal. The following are examples:

ASHFORD, R. W. & BARNISH, G. (1989) *Strongyloides fuelleborni* and similar parasites in animals and man. In: *Strongyloidiasis: a major roundworm infection of man* (editor, D. I. Grove) pp. 271–286. Taylor & Francis: London.

GARSIDE, P. & BEHNKE, J. M. (1989) Primary infection of hamsters with *Ancylostoma ceylanicum*. *Parasitology*, **98**, 283–289.

Contents

	Pages
Antibodies in the serum of golden hamsters experimentally infected with the intestinal trematode <i>Echinostoma caproni</i> . P. E. SIMONSEN, B. B. ESTAMBALE and M. AGGER	239-247
The effects of crowding on adults of <i>Echinostoma caproni</i> in experimentally infected golden hamsters. G. YAO, J. E. HUFFMAN and B. FRIED	248-254
Karyological studies of <i>Isthmiophora melis</i> (Schrank, 1788) from its type locality. T. MUTAFOVA, I. KANEV and U. EIZENHUT (Research Note)	255-258
<i>Lecithochirium furcolabiatum</i> (Jones, 1933), Dawes 1947: the miracidium and mother sporocyst. B. F. MATTHEWS and R. A. MATTHEWS	259-269
Scanning and transmission electron microscopical observations on the tegument of encysted metacercariae and adults of <i>Zygocotyle lunata</i> . S. W. B. IRWIN, T. J. J. McCLOUGHLIN and B. FRIED	270-274
Factors influencing the metacercarial intensity in ants and the size of <i>Dicrocoelium dendriticum</i> metacercarial cysts. R. SCHUSTER	275-279
The adhesive attitudes of some gill-parasitic capsalid monogeneans. I. D. WHITTINGTON and G. C. KEARN	280-285
Complications of <i>Ascaris lumbricoides</i> infection: case reports from south western Uganda. J. B. MPAIRWE	286-288
Glucose 6-phosphate dehydrogenase: isoenzymatic pattern in <i>Oesophagostomum venulosum</i> , <i>Trichuris ovis</i> and <i>T. suis</i> . B. RODRIGUEZ, C. CUTILLAS, P. GERMAN and D. GUEVARA	289-295
Experimental infection routes of <i>Angiostrongylus cantonensis</i> in mice. L. WANG, D. CHAO and E. CHEN	296-300
<i>Onchocerca lienalis</i> : comparison of techniques for the cryopreservation of microfilariae within skin-snips or free of host tissues. S. K. TAGBOTO and S. TOWNSON	301-309
Hatching of second-stage larvae of <i>Toxocara canis</i> : a rapid method for processing large numbers of worms. N. S. CROWCROFT and S. H. GILLESPIE (Research Note)	311-312
Prevalence of endoparasites in dog faecal deposits in Jordan. M. N. ABO-SHEHADA and Y. ZIYADEH (Research Note)	313-314
Subject Index	315-317
Author Index	319-321
