(Received 19 April 1993; accepted 20 April 1993)

When this article appeared in the April issue of *Journal of Materials Research*, two of the figures were published incorrectly. The correct figures with their appropriate captions are shown below.

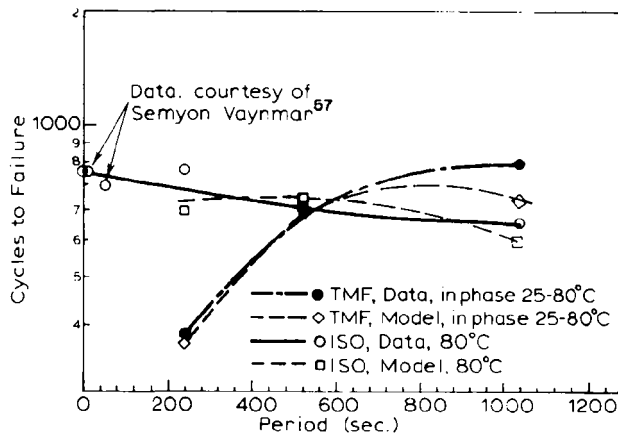

FIG. 5. Effect of period on  $N_f$  at 0.6% strain range.

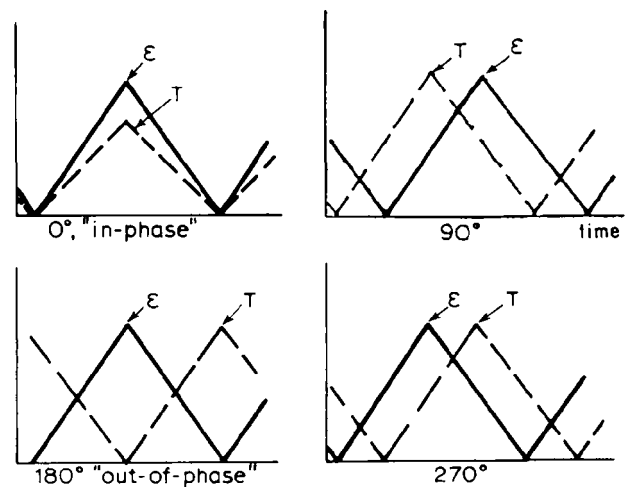

FIG. 9. Timing diagrams illustrating TMF phase relationships. The ordinate represents both applied strain and temperature. Actual applied strain and temperature curves were very similar to those shown.
