

## INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,  
Department of Mathematics, The University of Queensland,  
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

### EDITORIAL POLICY

**1. References.** Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

### 2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

**3. Subject Classification.** Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

**4. Abstracts of Ph.D. Theses.** The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

**5. Electronic Manuscripts.** The Bulletin is produced using  $\text{AMS-TEX}$ . Authors who are able to do so are invited to prepare their manuscripts using  $\text{TEX}$ . (We accept Plain  $\text{TEX}$ ,  $\text{AMS-TEX}$  or  $\text{LATEX}$ .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to [ams@maths.uq.edu.au](mailto:ams@maths.uq.edu.au). [Typed manuscripts are, of course, still acceptable.]

# Bulletin of the Australian Mathematical Society

<b>Dynamics of homeomorphisms on minimal sets generated by triangular mappings</b> Gian Luigi Forti, Luigi Paganoni and Jaroslav Smítal	1
<b>Properties of the Berezin transform of bounded functions</b> Jaesung Lee	21
<b>Generalised variational-like inequalities and a gap function</b> Q.H. Ansari and J.C. Yao	33
<b>Automorphic pseudodifferential operators, Poincaré series and Eisenstein series</b> Min Ho Lee	45
<b>Hankel operators from the space of bounded analytic functions to the Bloch space</b> Ruhan Zhao	53
<b>Polynomial equations for matrices over finite fields</b> Jiuzhao Hua	59
<b>Two amalgams related to the alternating group on six letters</b> Panagiotis Papadopoulos	65
<b>Circular colouring and graph homomorphisms</b> Xuding Zhu	83
<b>Wandering domains in the dynamics of certain meromorphic functions</b> Yuefi Wang	99
<b>Some applications of Wedderburn's factorisation theorem</b> Yoav Segev	105
<b>Some results on coincidence points</b> Abdul Latif and Ian Twedde	111
<b>Shin's formulas for Eigenpairs of symmetric tridiagonal 2-Toeplitz matrices</b> Khakim D. Ikramov	119
<b>Extension of localised approximation by neural networks</b> Nahmwoo Hahm and Bum Il Hong	121
<b>Conjugate radius and isometry group of a manifold with negative Ricci curvature</b> Seong-Hun Paeng	133
<b>A generalisation of the lower radical class</b> Robert McDougall	139
<b>Circumradius-diameter and width-inradius relations for lattice constrained convex sets</b> Poh Wah Awyong and Paul R. Scott	147
<b>Bipartite graph bundles with connected fibres</b> Sungpyo Hong, Jin Ho Kwak and Jaeun Lee	153
<b>Inradius and circumradius for planar convex bodies containing no lattice points</b> P.R. Scott and P.W. Awyong	163

## ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

<b>Permanents, matchings and Latin rectangles</b> Ian M. Wanless	169
<b>Representations of quivers over finite fields</b> Jiuzhao Hua	171
<b>Planar functions and related topics in finite fields</b> Robert S Coulter	173
<b>Trades and defining sets with applications to access schemes</b> Brenton Gray	175
