

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Volume 60 Number 2

Original Articles

- 367 BOJAN BASRAK, NIKOLINA MILINČEVIĆ AND PETRA ŽUGEČ. On extremes of random clusters and marked renewal cluster processes
- 382 JOACHIM KERNER AND MAXIMILIAN PECHMANN. Bose–Einstein condensation for particles with repulsive short-range pair interactions in a poisson random external potential in \mathbb{R}^d
- 394 LEVENT ALI MENGÜTÜRK. Time-convergent random matrices from mean-field pinned interacting eigenvalues
- 418 FRANCIS COMETS, MIKHAIL MENSHIKOV AND STANISLAV VOLKOV. Generalizations of forest fires with ignition at the origin
- 435 DIRK-PHILIP BRANDES, IMMA VALENTINA CURATO AND ROBERT STELZER. Inheritance of strong mixing and weak dependence under renewal sampling
- 452 ANITA BEHME AND PHILIPP LUKAS STRIETZEL. On moments of downward passage times for spectrally negative Lévy processes
- 465 JIANHAI BAO AND JIAN WANG. Exponential ergodicity for a class of Markov processes with interactions
- 479 FABRIZIO CINQUE. Reflection principle for finite-velocity random motions
- 493 ALEXANDER R. WATSON. A growth-fragmentation model connected to the ricocheted stable process
- 504 DAVIT MARTIROSYAN AND VICTOR OHANYAN. On intersection probabilities of four lines inside a planar convex domain
- 528 YOUNG LEE AND THORSTEN RHEINLÄNDER. On the cumulant transforms for Hawkes processes
- 542 SIMON POJER AND STEFAN THONHAUSER. Ruin probabilities in a Markovian shot-noise environment
- 557 ONNO BOXMA AND MICHEL MANDJES. A decomposition for Lévy processes inspected at poisson moments
- 570 BASILE DE LOYNES. Local limit theorem for a Markov additive process on \mathbb{Z}^D with a null recurrent internal Markov chain
- 589 ERCAN SÖNMEZ. On mixed fractional stochastic differential equations with discontinuous drift coefficient
- 607 SERIK SAGITOV. Critical branching as a pure death process coming down from infinity
- 629 TATIANA BRAILOVSKAYA AND MIKLÓS Z. RÁCZ. Tree trace reconstruction using subtraces
- 642 BALÁZS GERENCSÉR. Analysis of a non-reversible Markov chain speedup by a single edge
- 661 KRISTOFFER GLOVER. With or without replacement? Sampling uncertainty in shepp’s urn scheme
- 676 BO LI AND GUODONG PANG. On the splitting and aggregating of Hawkes processes
- 693 RUHUL ALI KHAN, DHRUBASISH BHATTACHARYYA AND MURARI MITRA. On some properties of distributions possessing a bathtub-shaped failure rate average
- 709 ANTONIO DI CRESCENZO AND ALESSANDRA MEOLI. Competing risks and shock models governed by a generalized bivariate poisson process
