Copying: This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, USA. Organizations in the USA who are also registered with the C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of \$16. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0959-2709/2019 \$16.

ISI Tear Sheet Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions. *For all other use*, permission should be sought from Cambridge or the American branch of Cambridge University Press.

Cover photograph: The Japanese Murrelet *Synthliboramphus wumizusume* is a rare seabird, endemic to Japan and South Korea, that is currently considered Vulnerable on the IUCN Red List. However, little is known of its at-sea distribution, habitat requirements or threats. In this issue, Mark Miller and colleagues present the results of five years of at-sea surveys around Japan to model the density of the species in relation to habitat parameters, and make spatial predictions to assess the adequacy of the current Japanese marine Important Bird and Biodiversity Area (IBA) network for the species.
