Metallurgy in Archaeology

A Prehistory of Metallurgy in the British Isles

R. F. TYLECOTE

This new book discusses the prehistorical period of British metallurgy which starts shortly after 2000 B.C. and can be said to end with the appearance of Agricola's 'De Re Metallica' in A.D. 1556. It contains a wealth of information which will be indispensable for all interested in the prehistory of metallurgy. A salient feature is the tables which give the locality of artifacts found and their chemical composition—the dating is necessarily wide owing to the unfavourable circumstances in which many of the objects were unearthed.

Contents: Native Metals; Copper and Copper Alloys; The Production of Tin and Tin-Alloys; Lead and Silver; Methods of Fabrication; The Coming of Iron; The Roman Iron Age; Iron in the Dark Ages and the Early Medieval Period; The Later Medieval Iron Ages; The Blast Furnace and the Finery.
