

of importance in judging of claims for damages in cases of railway or other injuries.

Dundas Grant.

Walker, Downie (Glasgow).—*A Case of Acquired Total Deafness, the result of Inherited Syphilis, with Post-Mortem.* "Arch. of Otol.," Vol. XXV., No. 1.

A TYPICAL case as regards personal and family history and functional examination. The base of the stapes was incorporated with, or ossified to, the border of the foramen ovale. The mastoid bone was solid. The outer part of the internal auditory meatus was much narrowed, and at its outermost part almost completely obliterated, as was also the vestibule. In the cochlea the modiolus and lamina spiralis ossis were unusually thickened, and of the semicircular canals only a trace of the external one could be found.

Dundas Grant.

Wilkin, G. C.—*Aural Polypi: their Symptoms, Diagnosis, and Treatment.* "Clin. Journ.," March 25, 1896.

THE author speaks favourably of parenchymatous injections of pyoktanin in malignant aural polypi, which he has employed in two cases. *Middlemass Hunt.*

MOLL'S TREATMENT OF ACUTE DISEASES OF THE ACCESSORY CAVITIES OF THE NOSE BY RESPIRATORY ASPIRATION.

Contributed by DR. DUNDAS GRANT.

IN the proceedings of the last annual assembly of the Dutch Society of Laryngology, Rhinology, and Otology, Dr. Moll, of Arnheim, contributed a description of a new simple and apparently very successful method of relieving, and even curing, the affections above described. In a few words, it consists in aspiration of the contents of these cavities by means of a forcible inspiration while the nose and mouth are firmly closed. In this way no air can be drawn into the chest, and there is a considerable lowering of pressure on the contents of these cavities. The fluid in them is thus drawn out to a greater or less extent, as was proved in Dr. Moll's cases by the appearance of pus in the nasal cavities, although it had been completely removed before the carrying out of the method. Furthermore, in a case in which an alveolar puncture had been already made, a manometer indicated a fall to the extent of fifteen millimètres of mercury during the forced inspiration. In a very illustrative case the patient carried out the process every two hours. She obtained immediate relief from the characteristic discomfort, and in a few days was perfectly well. In the last few lines of the abstract of his communication the interesting secret emerges that he was in his own person a sufferer from this affection. Necessity was possibly the mother of invention, and the relief which he himself experienced has doubtless been the cause of his discovering a method which certainly appeals to common sense, and which recommends itself on account of its simplicity.

THE NEW RHINOLOGY.

UNDER the title of "A Humorous Séance" the *Scalpel* (March, 1896) gives the account of a meeting of the Medical Society of the Twenty-ninth Arrondissement, Paris. Amongst the communications presented was "An essay by Dr. Ducornet, the eminent rhinologist, on 'The difference of arterial pression in each of the two nasal fossæ, right and left, with operatory deductions.' In his conclusions the author insists, with much reason, on the facts already partially recognized—that rhinology is a field far too vast for the activity of a single specialist; that it is, therefore, necessary to divide its specialization; and that in future the illuminants of this branch of medical science should be known as *right* rhinologists and *left* rhinologists, the *septum nasi* alone being common ground for the two, though they should, as far as possible, endeavour to confine their interventions each to his own surface of that formation, even in cases where it may be considerably deflected to one or other side."

A. B. Kelly.

THE TWELFTH INTERNATIONAL CONGRESS OF
MEDICINE, MOSCOW.

7th (19th) to 14th (26th) August, 1897.

ABSTRACTS FROM THE REGULATIONS.

4. Those persons who desire to take part in the Congress should forward twenty-five francs for their card of membership. This gives the right to take part in all the work of the Congress, and to all the publications—as, for example, "The Report of the Congress"—as soon as they are published.

5. When forwarding their subscription to the treasurer of the Congress, members should state fully and legibly their name, address, and profession. Their visiting card should be sent also.

7. Section XII.A, Otology. XII.B, Laryngology and Rhinology.

19. The time allowed for each communication shall not exceed twenty minutes for each speaker, and for those who take part in the discussions five minutes.

20. French is recognized as the official language for Congress in all international relations. In the general assembly all European languages are permitted.

For either communications or debate in the sections, either French, German, English, or Russian.

24. The presidents of the sections will reply to sectional questions. Other questions and communications should be addressed to the secretary-general of the Congress.

N.B.—All laryngologists and otologists are requested to send their addresses to Dr. A. Belayeff, secretary of the section.

THIRD INTERNATIONAL CONGRESS OF DERMATOLOGY.

THE Third International Congress of Dermatology will be held in London, this year, from August 4th to 8th inclusive. The meetings will take place in the Examination Hall of the Royal College of Physicians and Surgeons, on the Victoria Embankment. Separate sections will be established for dermatology and syphilis, the meetings of these being held simultaneously.

The scientific portion of the programme is practically complete, and the large number of British as well as foreign physicians who have testified their intention of being present ensures the success of the Congress, of which Mr. Jonathan Hutchinson is president.

The fee for membership, which entitles to the volume of "Transactions" to be issued, is £1, payable to the hon. treasurer, Mr. Malcolm Morris, 8, Harley Street, London, W.

The secretary-general, to whom all communications may be addressed, is Dr. J. J. Pringle, 23, Lower Seymour Street, London, W.

NEW PREPARATIONS.

COMPOUND CAFFEINE TABLOIDS (Burroughs, Wellcome, & Co.,
Snow Hill Buildings, London).

All our English readers are so well acquainted with the excellence of this firm's productions that in the following examples we shall surmise that to be admitted. The blending of antipyrine, grs. iij., and caffeine, gr. i., has done much to remove the objections, both fanciful and real, to the former. The proportion of the latter would be needlessly high if it were to effect this only, but it distinctly aids the physiological action of antipyrine, especially in regard to the rapidity of its action. We have noticed this particularly in reflex headache.

**SOLOIDS OF CARBOLIC ACID. TABLOIDS OF COMPRESSED OXALATE OF
CERIUM, CITRATE OF LITHIA, AND BITARTARATE OF LITHIA.**

They are old friends with new faces. The soloids are most valuable, each containing five minims of pure acid. Oxalate of cerium in this form is easily disposed of by the patient, and probably better retained. The two last preparations effervesce in the mouth, and will prove of undoubted utility in gouty states of the pharynx, by acting locally first. The acid tartarate is also said to have less disagreeable effects, and is a drug which seems to have advantages over the citrate, being more tolerated by the stomach.

LITMUS PENCIL (Thos. Christy & Co., 25, Lime Street, E.C.) 1s. 3d.

We have seldom seen a more useful addition to the consulting-room or the doctor's bag. Litmus paper is prepared by simply rubbing a piece of paper with the pencil, red or blue as required. Its moderate price is also greatly in its favour.

BOOKS, ETC., RECEIVED.

Handbuch der Laryngologie und Rhinologie. Dr. Paul Heyman. 1 Lieferung. Wien, 1896: Alfred Holder.

Eine Neue Transplantations: Methode für die Radikal Operation bei Chronischen Eiterungen des Mittelohres. By Stabarzt Dr. Passow. Berlin, 1895: H. Hirschwald, N. W. Unter den Linden, 68.

Cooper Medical College (San Francisco) Annual Announcement. 1896.

Journal of Eye, Ear, and Throat Disease. Vol. I., No. 1, April, 1896. F. M. Chisolm, M.D., and J. R. Winslow, M.D., Editors. Baltimore.

NOTICE TO SUBSCRIBERS.

THE Editors have made arrangements by which binding covers can be obtained of the Publisher (11, Adam Street, W.C.). The covers are roan backs and gold lettering, for the sum of 1s. 6d. By this means uniformity in binding would be obtained. The first cover, Vol. X., January to June, inclusive, 1896, will be obtainable the first week in July.
