

Subscription rates

Subscription rates for volume **42** (2010) of *Advances in Applied Probability* (AAP) are as follows (post free and including online access at <http://projecteuclid.org/aap/>): US\$312.00; A\$390.00; £186.00 for libraries and institutions; or US\$104.00; A\$130.00; £62.00 for individuals belonging to a recognised scientific society. The subscription rates for volume **47** (2010) of *Journal of Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 272 9782; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

Research papers are published in both *Journal of Applied Probability* (JAP) and *Advances in Applied Probability* (AAP), with longer papers typically appearing AAP. However, assignment of papers between the two journals is made by the Editor on an issue-by-issue basis. A submission to Applied Probability is considered as a submission to either journal. In addition, AAP publishes letters specifically related to papers that have appeared in AAP and JAP publishes short communications of a few printed pages in the nature of notes and letters specifically related to papers that have appeared in JAP. Review papers and papers in *stochastic geometry* and *statistical applications* are published in AAP.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2000 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the \LaTeX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is l.nash@sheffield.ac.uk. Authors should also submit one hard copy to the Executive Editor, as above.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/10

Stochastic Geometry and Statistical Applications

- 913 TOMASZ SCHREIBER AND CHRISTOPH THÄLE. Second-order properties and central limit theory for the vertex process of iteration infinitely divisible and iteration stable random tessellations in the plane
- 936 FLORIAN VOSS, CATHERINE GLOAGUEN AND VOLKER SCHMIDT. Scaling limits for shortest path lengths along the edges of stationary tessellations

General Applied Probability

- 953 XIANPING GUO AND LIUER YE. New discount and average optimality conditions for continuous-time Markov decision processes
- 986 MUHAMAD AZFAR RAMLI AND GERARD LENG. The stationary probability density of a class of bounded Markov processes
- 994 HOSAM M. MAHMOUD. Gaussian phases in generalized coupon collection
- 1013 J. VALERO, M. PÉREZ-CASANY AND J. GINEBRA. On zero-truncating and mixing Poisson distributions
- 1028 ALESSANDRO DE GREGORIO. Stochastic velocity motions and processes with random time
- 1057 PREDRAG R. JELENKOVIĆ AND MARIANA OLVERA-CRAVIOTO. Information ranking and power laws on trees
- 1094 SEN TAN AND AIHUA XIA. On customer flows in Jackson queueing networks
- 1102 NIGEL BEAN AND GUY LATOUCHE. Approximations to quasi-birth-and-death processes with infinite blocks
- 1126 JINZHU LI, QIHE TANG AND RONG WU. Subexponential tails of discounted aggregate claims in a time-dependent renewal risk model
- 1147 MARTIN HUTZENTHALER AND JESSE EARL TAYLOR. Time reversal of some stationary jump diffusion processes from population genetics
- 1172 R. MCVINISH AND P. K. POLLETT. Limits of large metapopulations with patch-dependent extinction probabilities
- 1187 REMCO VAN DER HOFSTAD, A. J. E. M. JANSSEN AND JOHAN S. H. VAN LEEUWAARDEN. Critical epidemics, random graphs, and Brownian motion with a parabolic drift
- 1207 Index (General Applied Probability)
- 1210 Index (Stochastic Geometry and Statistical Applications)
