Stanford Studies in Mathematics and Statistics IV

Studies in Mathematical Analysis and Related Topics

Essays in Honour of George Pólya

EDITED BY GABOR SZEGO AND OTHERS

This volume consists of sixty research papers, all published here for the first time, by leading mathematicians from the United States and Europe. It will be of interest to both pure and applied mathematicians and to theoreticians in allied sciences. 80*s net*

Oxford Mathematical Monographs

The Theory of Laminar Boundary Layers in Compressible Fluids

K. STEWARTSON

The aim of this book is to give an account of the present position of the theory. It deals with the principles underlying the derivation of the equations, and the properties of the two-dimensional steady boundary layers; with three-dimensional boundary layers; time-dependent problems, interaction between the boundary layers and the main stream. Attention is restricted throughout to perfect fluids, and the question of instability is not discussed. 63*s net*

Tomorrow's Math

Unsolved Problems for the Amateur

C. STANLEY OGILVY

The author describes, in terms intelligible to the amateur, more than 150 unsolved problems in all branches of mathematics. *Numerous line figures* 35*s net*

Linear Programming and Extensions

GEORGE B. DANTZIG

A book for both mathematicians and all who are interested in the possibilities of using computers for taking decisions in economic, industrial and administrative life. The author is a pioneer in the field of linear programming. 92*s net*
(*Princeton University Press*)

Quantum Mechanics

for Mathematicians and Physicists

ERNEST IKENBERRY

This book is intended for physicists with a minimum of mathematics and mathematicians with little or no background in physics. It presents the elements of the mathematical theory of quantum mechanics with sufficient applications to give substance to the theoretical framework. 64*s net*

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The aim of this journal of abstracts is to give **complete coverage of published papers in the field of statistical theory** (including associated aspects of probability and other mathematical methods) **and new published contributions to statistical method.**

There are approximately two hundred and fifty journals published in various parts of the world which are wholly or partly devoted to the field of statistical theory and method and which are brought within the scope of this journal of abstracts.

In addition to the vast array of journal literature, abstracts of the special collections of papers as published in reports of conferences symposia and seminars, together with the published reports of experiment and other research stations, are also included.

The abstracts are about **400** words long—the recommendation of UNESCO for the "long" abstract service: they are in the English language although the original language of the paper is noted on the abstract together with the name of the abstractor. In addition the address of the author(s) are given in detail to facilitate contact in order to obtain further detail or request an off-print. **The journal is published quarterly and contains approximately 750 abstracts per year.**

A scheme of classification has been developed for the abstracts that is flexible and facilitates the transfer of code numbers to punched cards. **A unique aspect of this journal** is that the pages are colour-tinted according to the main sections of classification. This method of colour-coding the pages provides a distinctive and powerful visual aid in the identification of abstracts in whatever manner the journal is filed for reference.

Annual Subscription	£5 (U.S.A. $16.00)
Single Number	30s. (U.S.A. $4.50)

Proceedings of the Glasgow Mathematical Association

Editorial Committee : R. A. RANKIN, R. P. GILLESPIE, T. S. GRAHAM
Department of Mathematics, The University, Glasgow

Volume 6. Part 2. July 1963

OBITUARY: Thomas Murray MacRobert.

F. F. BONSALL. A polynomial iteration for the spectral family of an operator.

F. M. RAGAB. Integrals involving products of modified Bessel functions of the second kind.

F. A. BOSTOCK and E. M. PATTERSON. A generalisation of Divinsky's radical.

DAVID ROSEN. An arithmetic characterisation of the parabolic points of $G(2\cos\pi/5)$.

C. J. TRANTER. A generalisation of Sonine's first finite integral.

P. J. C. LAMONT. Arithmetics in Cayley's algebra.

K. C. SHARMA. Theorems relating Hankel and Meijer's Bessel transforms.

E. T. COPSON. On the asymptotic expansion of Airy's integral.

J. W. S. CASSELS. Corrigendum.

The proceedings are published twice yearly, four parts comprising a volume of about 200 pages. The subscription price per volume is £3 ($10.00), post free, payable in advance. Single parts may be supplied at a cost of 15*s*. ($2.50) net.

Inquiries and subscription orders should be sent to the publishers
