American Branch: 32 East 57th Street, New York, N.Y. 10022

SUBSCRIPTION £5 net (U.S.A. \$16.50) per volume

SINGLE PARTS 45s. net (U.S.A. \$6.50)

GENETICAL RESEARCH

GENETICAL RESEARCH publishes original work on all aspects of genetics, or in any field of research which has an important bearing on genetics. Papers will be submitted to referees before acceptance. They will generally be printed in order of acceptance. In addition, Short Papers (see below) may be included if received 3 months before publication date.

GENETICAL RESEARCH is published bi-monthly.

Single parts 45s. net (\$6.50 in U.S.A.), plus postage.

Three parts form a volume. The subscription price of a volume (which includes postage) is £5 net (\$16.50 in U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with minimum delay.

Second class postage paid at New York, N.Y.

Orders should be sent to a bookseller or to the publishers, Cambridge University Press, P.O. Box 92, London, N.W. 1 and 32 East 57th Street, New York, N.Y. 10022.

NOTES FOR CONTRIBUTORS

CONTRIBUTIONS will be welcomed from scientists of all nationalities, but must be written in English, with an English summary. An additional summary in French, German, Russian or Italian will be accepted. Papers should be sent to the Executive Editor, Dr E. C. R. Reeve, Institute of Animal Genetics, West Mains Road, Edinburgh 9.

GENERAL. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers published in *Genetical Research* may not be reprinted or published in translation without permission from the Editorial Board. Papers should be as concise as clarity permits, and illustrations kept as few as possible.

SHORT PAPERS. This category is designed for concisely written reports of work for which rapid publication is considered desirable. Such papers will normally be published within three months of receipt in acceptable form. They should not exceed 6 pages of print in length.

TYPESCRIPTS. A top copy and one carbon copy should be submitted. They should be typed with double-spacing, on one side of the paper, leaving margins of about $1\frac{1}{2}$ inches at the left-hand side and head of each sheet. Quarto is preferred to foolscap paper. Heavily corrected typescripts may have to be returned to the author for retyping. Papers should state the name and address of the author (or his proxy) to whom proofs are to be sent. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper, and changes of address and sources of financial support may be added in footnotes.

A short title should be supplied for running headlines; this must not exceed 50 characters, counting each letter and space as one character.

(continued inside back of cover)

Timely Reference Works

IMMUNOGENETICS

By W. H. HILDEMAN, University of California, Los Angeles

Covering all major aspects of the broad field of immunogenetics, this book fills the need for a single source of basic principles and their applications to current and persisting problems. The author considers immunogenetics to include the multiple fields where immunology and genetics overlap and subserve each other. These fields are essentially indicated by the book's chapter headings: Inheritance of immune response capacities, Characterization of micro-organisms, Cellular alloantigens, Serum allotypes, Histocompatibility genetics of tissue transplantation, Immunological tolerance and transplantation disease, and Histocompatibility typing and circumvention of alloimmune reactions. Principles and problem solving are stressed throughout the book. Figures and tables are meant to be considered in context as an integral part of the presentation, and a short list of key references with comment on their focus follows each chapter. The level of consideration is intended especially for the new generation of graduate students and biomedical students. The book will also meet the needs of many advanced undergraduates as well as post-doctoral professionals. It can, in addition, enrich courses in immunology or genetics in the light of recent research and curricular change. Ready in August, approx. 288 pages, prob. \$11.50.

THE MOLECULAR BASIS OF MUTATION

By JOHN W. DRAKE, University of Illinois, Urbana

This book offers the first extensive introduction to mutational mechanisms, one of the most rapidly progressing and fruitful areas of molecular biology. It presents a broad outline of present knowledge, while emphasizing many of the doubtful areas. The discussion is primarily concerned with mutation in procaryotic microorganisms because most of the early conceptual advances in molecular genetics arose from studies on these forms. Great emphasis is given to bacteriophage systems, since these have been the most revealing in the development of current theory and description. A brief introduction to the structure, replication, and genetics of viruses is provided. The effects of mutation on gene action are briefly considered in chapters on suppression and on polarity and complementation. The book is heavily referenced, with investigators' names appearing in the body of the book. Extensive use is made of explanatory figures, and suggestions for future investigations are frequently provided. The book is designed to appeal to graduate students and professional investigators. No detailed knowledge of genetics or biochemistry is assumed. Ready Fall 1969, approx. 256 pages, prob. \$13.95.

COLUMBIA

COLUMBIA

THE RISE AND FALL OF T. D. LYSENKO

Zhores A. Medvedev

Translated by I. Michael Lerner

This book tells the story of Soviet genetics in the period 1937–1964. In these years T. D. Lysenko, an illiterate and fanatical charlatan, was allowed absolute dictatorship and control over research in biology and practical agriculture in the Soviet Union. His domination in these subjects not only stifled the development of science but also had far-reaching and destructive influence on Soviet economy. Geneticists and agriculturists in the West have long speculated about the machinery of the Lysenko 'take-over' in biology and about the situation that made it possible. This book provides an answer. \$10.00

CAMBRIDGE UNIVERSITY PRESS

JOURNAL OF REPRODUCTION AND FERTILITY

The Journal publishes original papers, abstracts of Proceedings, and occasionally reviews and bibliographies, dealing with the morphology, physiology, biochemistry and pathology of reproduction in man and animals, and with the biological, medical and veterinary problems of fertility and lactation. Nine numbers¹ are issued to give three volumes a year.

Papers appearing in June 1969 include:

Interview with Dr H. M. EVANS.

D. P. BOSHIER. A histological and histochemical examination of implantation and early placentome formation in sheep.

J. MATOUSEK. Effects on spermatogenesis in guinea-pigs, rabbits and sheep after their immunization with sexual organ fluids of bulls.

T. D. QUINLIVAN and T. J. ROBINSON. Numbers of spermatozoa in the genital tract after artificial insemination of progestagen-treated ewes.

L. A. JOHNSON, R. J. GERRITS and E. P. YOUNG. Quantitative analysis of porcine spermatozoa and seminal plasma phospholipids as affected by frequency of ejaculation.

A. N. BRUERE, R. B. MARSHALL and D. P. J. WARD. Testicular hypoplasia and XXY sex chromosome complement in two rams: the ovine counterpart of Klinefelter's syndrome in man.

D. W. FAWCETT, P. M. HEIDGER and L. V. LEAK. Lymph vascular system of the interstitial tissue of the testis as revealed by electron microscopy.

M. ALLANSON, C. L. FOSTER and E. CAMERON. Mitotic activity in the adeno-hypophysis of pregnant and lactating rabbits.

R. H. SCHULTZ, H. B. BURCALOW, M. L. FAHNING, E. F. GRAHAM and A. F. WEBER. A karyometric study of epithelial cells lining the glands of the bovine endometrium.

S. K. SAKSENA and R. R. CHAUDHURY. Effect of orally administered azasteroids on implantation in rats.

L. E. APPELGREN. Histochemical demonstration of drug interference with progesterone synthesis.

G. E. KODITUWAKKU and E. S. E. HAFEZ. Blastocyst size in Dutch-belted and New Zealand rabbits.

A. McLAREN. Can mouse blastocysts stimulate a uterine response before losing the zona pellucida?

J. M. O'DONNELL. Intracellular levels of sodium and potassium in bull spermatozoa in relation to cell metabolism.

Editorial correspondence should be sent to the Editor, Journal of Reproduction and Fertility, 8 Jesus Lane, Cambridge, England, and business correspondence to the publishers.

The subscription rate for 1969 is £7 per volume or £21 per year (three volumes). U.S.A. and Canada \$23.50 per volume or \$70.00 per year.

**TWO WORLD-RENOWNED SHEEP GENETICISTS
SURVEY RESEARCH FINDINGS**

Quantitative Genetics in Sheep Breeding

By **HELEN NEWTON TURNER** and
SYDNEY S. Y. YOUNG

Helen Newton Turner, Head of the Animal Breeding Section of the Commonwealth Scientific and Industrial Research Organization, Melbourne, Australia, and Sydney S. Y. Young, Professor of Genetics at Ohio State University, here present their theories of quantitative genetics related to the genetic improvement of livestock. The arguments developed and the conclusions drawn cover all the major topics in quantitative theory and its use. While the authors use data derived from their research with the Merino breed of sheep in Australia, their findings can be applied to the problems of genetic improvement of other kinds of stock reared under different conditions for other markets.

This book will be a useful reference work for research animal and plant breeders and for workers in the field of population and biometrical genetics. Professional animal breeders will find it invaluable. *334 pages. \$17.50*
