

COMPEL

THE INTERNATIONAL JOURNAL FOR
COMPUTATION AND MATHEMATICS IN
ELECTRICAL AND ELECTRONIC
ENGINEERING

\$40 SPECIAL OFFER

EDITORS:

M.S. Adler, New York, U.S.A.
M.V.K. Chari, Schenectady, U.S.A.
G. Costache, Ottawa, Canada
H.W. Dommel, Vancouver, Canada
R.W. Dutton, California, U.S.A.
W.L. Engl, Aachen, West Germany.
R.L. Ferrari, Cambridge, England.
W. Fichtner, New Jersey, U.S.A.
E.M. Freeman, London, England.
J. Frey, New York, U.S.A.
R. Glowinski, Le Chesnay, France.
G.D. Hachtel, New York, U.S.A.
R.F. Harrington, New York, U.S.A.
P.B. Johns, Nottingham, England.
D.P. Kennedy, Florida, U.S.A.
R. Kluge, Berlin, GDR.
M. Kurata, Kanagawa, Japan.
D.A. Lowther, Montreal, Canada.
I. Mayergoyz, Maryland, U.S.A.
M.S. Mock, Jerusalem, Israel.
E. Munro, London, England.
D.H. Navon, Massachusetts, U.S.A.
T. Ohtsuki, Tokyo, Japan.
Y. Okuto, Kawasaki, Japan.
S. Pissanetzky, Bariloche, Argentina.
S.J. Polak, Eindhoven,
The Netherlands.
D.J. Rose, New Jersey, U.S.A.
A.V. Rzhonov, Novosibirsk, U.S.S.R.
J.C. Sabonnadière, Grenoble, France.
W.H.A. Schilders, Eindhoven,
The Netherlands.
P. Silvester, Montreal, Canada.
H. Steinbigler, Munich,
West Germany.
O.V. Tozoni, Kiev, U.S.S.R.
C.W. Trowbridge, Didcot, England.
L.R. Turner, Illinois, U.S.A.
A. Viviani, Genoa, Italy.
A. Wexler, Winnipeg, Canada.
R.A. Willoughby, New York, U.S.A.

MANAGING EDITOR:

J.J.H. Miller, Dublin, Ireland.

AIMS AND SCOPE:

COMPEL exists for the discussion and dissemination of numerical and analytical methods in all areas of electrical and electronic engineering. The main emphasis of the papers is on the methods. Applications of methods to particular engineering problems may be given to illustrate their use in practice.

Recent contributions include:

Improved convergence rates for finite-element approximations in cylindrical coordinate geometries
Analysis of a discretization algorithm for stationary continuity equations in semiconductor device models
Finite-element solution of steady-state skin-effect problems in straight flat conductors
A point basis for multivariable piecewise linear interpolation and design centering
The multiple multipole method (MMP)
Finite-element mesh generation from geometric models
MEMBRE: An efficient two-dimensional process code for VLSI
An H-field solution for electromagnetic scattering by a conducting body of revolution
CAD modelling of diffused p-n junctions
Iteration methods for the calculation of steady magnetic fields in nonlinear ferromagnetic media
A Monte-Carlo particle model and its application to a study of the influence of the doping profiles on characteristics of field-effect transistors

COMPEL is published quarterly, in March, June, September and December
One volume per annum, 4 issues per volume
ISSN 0332-1649

SUBSCRIPTION RATES: Volume 1 (1982) US\$96
Volume 2 (1983) US\$109
Volume 3 (1984) US\$119

SPECIAL OFFER: Individual subscribers can obtain COMPEL for US\$40/year provided their departmental or institutional library is a subscriber.

Rates include surface postage and packing.

ADVERTISEMENTS

Advertisements for conferences, seminars and short courses are accepted by COMPEL. Professional and commercial advertisements are also acceptable provided that they are informative and pertinent to the aims and scope of the journal. Rates for advertisements are:

1 page US\$246 ½ page US\$150 ¼ page US\$99

BOOLE

Boole Press Limited, P.O. Box 5, 51 Sandycove Road, Dún Laoghaire,
Co. Dublin, Ireland. Telephone (+ 353-1) 808025
Telex 92240 SOTR EI Telegram BOOLEPRESS DUBLIN

Information for Contributors

1. Manuscripts must be written in English. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Associate Editor or the Editor.
2. The typescript should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.
3. The title and section headings should highlight the significant points. A short abstract should precede the main text.
4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.
5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy.
6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables.
7. References should be cited in the text, according to the Harvard (Author/date system), but giving the last name of the author(s) followed by a comma and the year of publication e.g. DICKEN & LLOYD 1979; FLETCHER 1978. If there is more than one work by an author in a given year, then label them alphabetically within each year, e.g. HALL, 1967a. The full references should be typed, *double-spaced*, on a separate sheet of paper at the end of the article. They must include the names and initials of all the authors, the year of publication, the full title of the article (or book), the standard abbreviated name of the journal.
SHEERIN, J. P. & ONG, R. S. B. 1980 *J. Plasma Phys.* 24, 157.
WHITTAKER, E. T. & WATSON, G. N. 1962 *A Course of Modern Analysis*, p. 36. Cambridge University Press, Cambridge.
8. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

LASER AND PARTICLE BEAMS

Volume 2 Part 2 May 1984

CONTENTS

J. A. Kunc, D. E. Shemansky and M. A. Gundersen: A fundamental theory of high power thyratrons for high power laser and beam applications III: the production of radiation 129

A. Ludmirsky: A new nonheated copper vapor laser 141

P. A. Miller, P. L. Dreike, J. P. Quintenz, R. J. Anderson, J. T. Crow, C. W. Mendel, Jr., G. S. Mills, L. P. Mix, S. E. Rosenthal, D. B. Seidel and J. P. VanDevender: Hybrid ion diode experiment on PBFA I 153

E. Forster, K. Goetz, K. Schäfer and W. D. Zimmer: Laser generated plasma as a source for real time studies in X-ray crystal research Part I: Fundamental remarks about source characteristics and requirements 167

K. Schäfer and W. D. Zimmer: Laser generated plasma as a source for real time studies in X-ray crystal research Part II: In search of an optimum choice of laser plasma coupling conditions 187

A. K. Chung and M. A. Prelas: Charged particle spectra from U-235 and B-10 micropellets and slab coatings 201

V. V. Alexandrov, N. G. Kovalsky, M. I. Pergament and A. M. Rubencnik: On absorption of the laser radiation in a plasma with subcritical density 213

G. A. Westenskow and J. M. J. Madey: Microwave electron gun 223

C. R. Devore, J. H. Gardner, J. P. Boris and D. Mosher: Hydrodynamic simulations of light ion beam-matter interactions: ablative acceleration of thin foils 227

A. Ludmirsky, M. Givon, S. Eliezer, Y. Gazit, S. Jackel, A. Krumbein and H. Szychman: Electro-optical measurements of high potentials in laser produced plasmas with fast time resolution 245
