COMPUTER ANALYSIS OF SKELETAL STRUCTURES

C. T. F. ROSS
and T. JOHNS

The increasing use of computers by structural engineers, including those working in aeronautical design, makes this a timely book. The basis of the book consists of five fully detailed computer programs in FORTRAN IV for the static analysis of one, two and three dimensional skeletal structures. An introduction and a range of worked examples show how the programs can be used in practice. This title will be valuable both to the practising engineer and to students taking courses in computer aided design.

The Programs:

- 1 Plane trusses
- 2 Continuous beams
- 3 Rigid-jointed plane frames
- 4 Space trusses
- 5 Rigid-jointed space frames
