Cambridge University Press

Numerical Recipes in C
William H. Press, Brian P. Flannery, Saul Teukolsky and William T. Vetterling

From the authors of the highly successful *Numerical Recipes* comes a new version of the book—*Numerical Recipes in C*. As in the previous FORTRAN/Pascal edition, this book fills a long recognized need for a practical, comprehensive handbook of scientific computation, presenting over 200 of the most important numerical algorithms for scientific work. *Numerical Recipes in C* presents each of the algorithms in C, utilizing the full power of the operator-rich C language, including dynamic memory allocation, modularization, pointer references to matrices, structured programming, and more.

C Version: March 1988 / 733 pp. / 35465-X / Cloth $44.50
FORTRAN/Pascal Version: 1986 / 818 pp. / 30811-9 / Cloth $44.50

Numerical Recipes Diskettes
William H. Press, et al.

These diskettes provide machine-readable source code of all the programs in the book *Numerical Recipes*. The user unpacks the desired programs into text files suitable for modification and incorporation into his or her applications. The files can then be compiled with any standard FORTRAN, Pascal or C compiler for IBM-PC, XT, or AT compatible machines, FORTRAN and Pascal versions are also available for the Apple Macintosh.*

Numerical Recipes Example Books
William T. Vetterling, et al.

Available in C, FORTRAN or Pascal, these paperback example books contain short model programs that exercise and demonstrate all the *Numerical Recipes* routines.

Numerical Recipes Example Diskettes
William T. Vetterling, et al.

Contains the demonstration programs from *Numerical Recipes Example Book* in C, FORTRAN or Pascal source code for IBM-PC, XT, or AT compatible machines. FORTRAN and Pascal versions are also available for the Apple Macintosh.*

*Other formats (including UNIX and VAX/VMS) and license arrangements are available from **Numerical Recipes Software**, P.O. Box 243, Cambridge, MA 02238.

PROBABILITY IN THE ENGINEERING AND INFORMATIONAL SCIENCES

INSTRUCTIONS FOR CONTRIBUTORS

CONTRIBUTIONS. Contributions are welcomed from all countries and must be written in English.

MANSUCRIPTS. Three copies of manuscripts should be sent to:

SHELDON ROSS, Editor
Probability in the Engineering and Informational Sciences
College of Engineering
Department of Industrial Engineering and Operations Research
University of California, Berkeley
Berkeley, CA 94720, U.S.A.
Tel. (415) 642-3615

Authors should also retain *one copy* of their manuscript for proof checking. Manuscripts sent to the Editor cannot be returned.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published, nor is presently submitted elsewhere. While under editorial review, it is the responsibility of the author to keep the Editor informed about submissions, publication plans and actual publication of related research or abstracts thereof in other outlets, including journals, review publications, journals in other disciplines, conference proceedings, and published dissertations. It is also understood that all persons listed as authors have given their approval for the submission of the paper and that any person cited as a source of personal communication has given his/her approval for such citation; written authorization may be required at the Editor's discretion. An author is required to obtain written permission for material for which he/she does *not* own copyright.

MANUSCRIPT ORDER. Manuscripts should be arranged as follows:

1. Cover sheet
2. Title page (*Page 1*)
3. Text
4. Acknowledgments (optional)
5. Notes (optional)
6. References
7. Appendix (optional)
8. Tables with titles (optional)
9. Figures with captions (optional)

PREPARATION OF MANUSCRIPT. The entire manuscript, including all notes and references, must be typed, **double-spaced** on 8½ × 11 inch or A4 paper leaving wide margins for copyediting. Manuscript pages should be numbered consecutively and include an unnumbered manuscript cover sheet. The cover sheet should list (a) the title of the paper in all uppercase letters, (b) a complete mailing address (including name) where proofs can be mailed, (c) name and telephone number of the lead author, (d) an abstract of 50 words or less, and (e) a short title of 50 characters or less to be used as a running head. *Page 1* should provide the article title, in all upper case letters, and all authors' names, as they should appear for publication, as well as complete addresses of affiliation. Any footnotes to the title or authors should be listed at the bottom of *Page 1*, as well as any recognition of Grant or other support. Acknowledgments should be listed in a separate section directly preceding the Notes (if there are any) or Reference sections.

EQUATIONS. All equations must be typewritten and numbered. The equation numbers should appear in parentheses in the right-hand margin. Text references to equations should take the following form: "For a further discussion of this material, see Eq. (3.2)." All superscripts and subscripts in equations must be clearly typed above and below the line, respectively. End of proof signposts should appear as such: ■.

TABLES AND FIGURES. Tables and Figures should be numbered consecutively and appear as one unit after the Reference section. All tables must have titles and all figures must have captions. All tables and figures must have at least one text reference that takes the following form: "For a different view of this matter see Table 1 and Figure 3." Tables may have footnotes that come directly after the body of the table. Table source notes should postcede table footnotes.

Figures must come "ready for reproduction." Figures may be either drawn by a professional artist or computer-generated and outputted on a Laser printer. The publisher cannot redraw any figures unless the author is willing to pay for the cost of such work. All figures should remain legible at a 50% reduction in size.

NOTES. When more than a simple reference citation is needed, notes may be used. In general, however, they should be avoided.

REFERENCES AND TEXT CITATIONS. References should be cited in the text using the author's (s') last name and the reference number in brackets. If there are more than two authors mentioned, the first author need only be listed along with the "et al." notation. Complete bibliographic information should be listed in the Reference section. In this section, references should be listed alphabetically. The first reference that appears in the alphabetical list should be numbered "1" and subsequent references should be numbered accordingly. Below are examples of both text citations and a sample reference list.

> Smith and Wollensky [4] have ascertained that the stress factor on metal parts *varies with the amount of heavy metal* ions included in such metal composition. According to Bishop et al. [1], this variance takes on an exponential factor not unlike that shown in the Mathew's Variable Rate Differential (see Mathew [3, p. 45]). Wing stress tests conducted by the Max Einschuss Laboratory [2] have verified such findings.

Journal names must not be abbreviated.

For general stylistic questions, *The Chicago Manual of Style* (13th edition) should be used.

COPYEDITING AND PROOFREADING. The publisher reserves the right to copyedit and to proofread all articles accepted for publication. Authors will be asked to review proofs of their articles to correct any typographical or technical errors.

OFFPRINTS. The lead author will receive 25 free offprints of the published article. An order form will be enclosed with page proofs to facilitate the ordering of additional offprints. After the article is in print, only reprints, in quantities of 50 copies or more, may be ordered by contacting the Journals Production Department (see inside front cover).

COPYRIGHT ASSIGNMENT. Authors will be required to transfer their copyright, on certain conditions, to Cambridge University Press.
