

58 ways to say good riddance to the bladder.

Just as the tubeless tire did away with the inner tube, the BLADDERLESS cuff is making history out of the old-fashioned blood pressure cuff.

Once you've experienced Critikon's DURA-CUF™ and DISPOSA-CUF™ bladderless cuffs, you'll say good riddance to the bladder. Because the hassles disappear with it. No more removal for washing. No seams ready to come apart. No bladder blowout.

The reusable DURA-CUF B.P. cuff is made of long-wearing nylon, lightweight with a soft, satiny finish. It's completely washable and color-coded for easy size identification. The DISPOSA-CUF B.P. cuff is designed for single-patient use. It's ideal for

departments where a wide selection of cuff sizes are needed or cuff replacement is frequent. Choose white for standard use; yellow for infection control.

Altogether, Critikon offers 58 different cuffs. That represents a wide selection of sizes—from neonatal to thigh—in both one- and two-tube styles. Because of their unique connector, two-tube cuffs are compatible with most existing manual and automatic blood pressure measurement devices. Count on Critikon to design a blood pressure cuff to the measure of perfection.

Call or write our Telemarketing Department today. Phone: 800-237-2033 (FL: 800-282-9151). Ask for your free "Measure of Perfection" brochure.

WHAT'S THE BEST HANDWASH/SCRUB? HANDS UP OR HANDS DOWN IT'S

HIBICLENS[®]

(CHLORHEXIDINE GLUCONATE)

It is well established that hand-washing is the most important single procedure in preventing transmission of hospital-acquired infections. HIBICLENS, the only proven antiseptic/antimicrobial, is the best agent available for both personnel handwashing and surgical scrubbing. HIBICLENS

provides the most immediate and prolonged protection against infection, with the best bactericidal "kill rate." And to encourage skin cleansing among hospital personnel, HIBICLENS offers cosmetic acceptability coupled with an excellent safety profile. Gentle to the skin, HIBICLENS is virtually

nonirritating and nonsensitizing, with a low potential for toxicity.

Available as both a liquid and impregnated in a disposable Sponge/Brush, HIBICLENS remains the single most effective antiseptic/antimicrobial skin cleanser for use throughout the hospital.

THE BEST ANTISEPTIC/ANTIMICROBIAL SKIN CLEANSER
