Aims and Scope

The journal provides a medium for the rapid publication of investigations of the molecular biology and biochemistry of parasitic protozoa and helminths. The main subject areas covered are:

- (1) biochemical composition;
- (2) biochemistry of low molecular weight compounds;
- (3) structure, properties and function of macromolecules;
- (4) biosynthesis and degradation of macromolecules;
- (5) intermediary metabolism;
- (6) membrane structure and function, including transport;
- (7) regulation;
- (8) genetic aspects;
- (9) mode of action of antiparasitic drugs;
- (10) biochemical aspects of host-parasite relationships.
