

is interesting and more usually found in pathology texts than in neuromuscular texts describes the tumours of muscle.

The book is rounded off with a chapter on metabolic myopathies and one on myasthenia.

In summary, "Neuromuscular disease" is targeted more to the pathologist who wishes to learn something of the clinical aspects

than to the researcher or clinician whose trade is muscle disease. Although one might expect more current information in a book published in 1990, it serves its purpose quite well.
