### Cover

“But what of thistle?” Plumeless thistle (*Carduus acanthoides* L.) is very branched and very spiny, one of the most prickly of all the thistles in North America. Plumeless thistle is an introduced winter annual or biennial and can become very weedy and form dense colonies, especially along waterways, ditches, and roadsides. Plumeless thistle is seldom found in cultivated fields, even when infestations are nearby in roadsides or pastures. The photograph was submitted by Rodney G. Lym, Plant Sciences Dept., North Dakota State University, Fargo, 58105 and is taken from “The Thistles of North Dakota” which describes all thistle species native and introduced into the state.
