

Subscription rates

Subscription rates for volume 47 (2015) of *Advances in Applied Probability* (AAP) are as follows (post free and including online access at <http://projecteuclid.org/aap/>): US\$344.00; A\$387.00; £222.00 for libraries and institutions; or US\$116.00; A\$131.00; £75.00 for individuals belonging to a recognised scientific society. The subscription rates for volume 52 (2015) of *Journal of Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 222 3926; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP. The section on *stochastic geometry and statistical applications* is published separately in AAP for the last time in 2015. Submissions in the area remain welcome and will be treated as submissions for the general section.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files. All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is submissions_japaap@sheffield.ac.uk.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/15

Volume 47 **Number 3**

Stochastic Geometry and Statistical Applications

- 611 BRUNO GALERNE AND RAPHAEL LACHIÈZE-REY. Random measurable sets and covariogram realizability problems
- 640 WERNER NAGEL AND EIKE BIEHLER. Consistency of constructions for cell division processes

General Applied Probability

- 652 D. J. HODGE AND K. D. GLAZEBROOK. On the asymptotic optimality of greedy index heuristics for multi-action restless bandits
- 668 N. LANCHIER AND N. TAYLOR. Galam's bottom-up hierarchical system and public debate model revisited
- 693 JEAN-STÉPHANE DHERSIN AND LINGLONG YUAN. On the total length of external branches for beta-coalescents
- 715 FLORIAN SIMATOS. State space collapse for critical multistage epidemics
- 741 XINXIN CHEN. A necessary and sufficient condition for the nontrivial limit of the derivative martingale in a branching random walk
- 761 JOSE BLANCHET AND JING DONG. Perfect sampling for infinite server and loss systems
- 787 XIAOOU LI AND JINGCHEN LIU. Rare-event simulation and efficient discretization for the supremum of Gaussian random fields
- 817 HUEI-WEN TENG, MING-HSUAN KANG AND CHENG-DER FUH. On spherical Monte Carlo simulations for multivariate normal probabilities
- 837 ANTOINE JACQUIER AND MATTHEW LORIG. From characteristic functions to implied volatility expansions
- 858 NICHOLAS R. PETERSON AND BORIS PITTEL. Distance between two random k -out digraphs, with and without preferential attachment
- 880 BERNARD BERCU AND ADRIEN RICHOU. Large deviations for the Ornstein–Uhlenbeck process with shift
- 902 HUIJIE QIAO AND JINQIAO DUAN. Nonlinear filtering of stochastic dynamical systems with Lévy noises
