**Senior Editors**

Julian Wiseman, University of Nottingham, UK

Animal papers

Robert E. L. Naylor, University of Aberdeen, UK

Crop & Soil papers

*The Journal of Agricultural Science* publishes papers concerned with the advance of agriculture and the use of land resources throughout the world. It publishes original scientific work related to strategic and applied studies in all aspects of agricultural science and exploited species, as well as reviews of scientific topics of current agricultural relevance.

**Price information is available at:**

## **Editor**

Dave Harris, Bangor University, UK

*Experimental Agriculture* publishes the results of original research from any source on the agronomy of field, plantation and herbage crops grown for human or animal food; for industrial purposes; and on systems of agricultural production, particularly in the warmer regions of the world. It is especially concerned with experimental work designed to explain agronomic results in biological and environmental terms. The journal publishes accounts of new experimental techniques, new methods of crop production and discusses problems in countries where production is developing rapidly. There are regular book reviews.

# Notes for Contributors

## Instructions to authors for submission of manuscripts to *Plant Genetic Resources: Characterization and Utilization*

### Submission

Manuscripts should be submitted by e-mail, in the form of attachments sent to the journal administrator Faye Kalloniat (mailto:plantgenetic-resources@googlemail.com). Manuscripts must be written in good English in double-spaced 12pt Times New Roman, using a current version of Microsoft Word or OpenOffice.org Writer. Figures and Tables should be included as separate attachments, and not pasted within the body of the text. Material submitted for publication in the print copy of the journal can be supported by supplementary material (figures or tables) which will be published online only. Any supplementary material must be submitted as separate attachment(s), each clearly marked as "supplementary figures" or "supplementary tables".

### Peer review process

All manuscripts are peer reviewed by two referees, who may or may not choose to remain anonymous. The journal makes every effort to complete the peer review process as quickly as possible, and generally this is achieved within 6 weeks of receipt of the manuscript. Articles which the editor considers may be accepted subject to modification must be resubmitted to the journal within 1 month of their return date in order to be considered part of the original submission. If this deadline is passed, a resubmission will be considered as a new manuscript. If authors choose to resubmit, they must provide, in a covering letter, a detailed point-by-point response to all the criticisms raised by each of the reviewers, and where appropriate, those raised by the editor.

### Copyright

The journal needs your agreement to publish your article and you will be sent a 'Transfer to copyright' form along with your first set of proofs. The form must be completed and returned to Cambridge University Press.

### Types of article

The journal accepts two forms of research report – full articles and short communications. The format of these is detailed separately below. Authors should note that the journal will not review submissions using the RAPD marker system, except where very large numbers of assays place a cost limitation on the analysis, or where RAPD data is combined with, and is co-analysed with other forms of descriptive data, which allows an objective means of assessing the credibility of the RAPDs.

### Full articles

The *title page* should carry the title of the article and the authors' names and addresses. Also indicate the name and include the e-mail address of the corresponding author. The e-mail address is particularly important as page proofs will be sent electronically as a .pdf file to the corresponding author for checking. (See '**page proofs**' section below).

The *text* must be divided into sections, each beginning on a new page. The sections consist of *Abstract*, *Introduction*, *Materials and Methods*, *Results*, *Discussion*, *Acknowledgements*, *References*, *Tables*, *Figure legends*. In exceptional circumstances, the *Results* and *Discussion* sections can be combined, but where this has been done, the authors must provide a justification for doing so in their covering letter. The *Abstract* should not normally consist of more than 200 words, and in no case should exceed 300 words. It should indicate the scope and main conclusions of the paper. Below the text, add a list of keywords for indexing purposes.

The *Introduction* should be no more than 750 words long. It should explain why the work was done, and briefly introduce the scope and contents of the paper.

The *Materials and Methods* section should detail experimental design and statistical analysis and should be kept as brief as possible with the aid of appropriate citation to the literature (e.g. for standard methods etc.).

*Results* should be recorded in the past tense.

The *Discussion* should interpret the results, and present them in the broader context of other work on the subject. It should not simply be a restatement of the results.

Citations within the text should be listed in chronological order, by author and date, using 'and' between names of joint authors and, for those with more than two authors, citing only the first author *et al.* (e.g. White *et al.*, 1993). The final list of references should be in the following format, and listed by alphabetical order of author, e.g.

Gregory RS (1985) Triticale breeding. In: Lupton FGH (ed.) *Wheat Breeding: Its Scientific Basis*. London: Chapman and Hall, pp. 20-30.

Kingston-Smith AH, Bollard AL, Humphreys MO and Theodorou MK (2002) An assessment of the ability of the stay-green phenotype in *Lolium* species to provide an improved protein supply for ruminants. *Annals of Botany* 89: 731-740.

Marshall DR and Brown AHD (1973) Stability of performance mixtures and multilines. *Euphytica* 22: 405-412.

Smith JE (1988) The effects of roguing on the frequency of atypical winter wheat plants. PhD Thesis, University of Nottingham.

**Tables** should be numbered consecutively (Table 1, Table 2 ..., NOT Table 1a, 1b, etc). Each should be headed by a caption worded in a way which makes it self-explanatory. Tables intended for the print copy must be no larger than one A4 page in portrait typed in 12pt font. These restrictions do not apply to tables presented as online supplementary material. *The number of tables in the print copy is limited to four.* All tables (both print copy and online supplementary) should be prepared as text files (MS Word or similar), and not as spreadsheets (MS Excel or similar). Supplementary tables must be labelled consecutively Table S1, Table S2 etc.

**Figures** must be submitted as jpeg files (not powerpoint). The size of the file containing all the figures intended for the print copy should not exceed 2Mb. The number of figures is limited to four per article. Authors will be asked to make a financial contribution towards the cost of printing colour illustrations. Additional figures can be published as online supplementary material, and these should be clearly labelled and referred to in the text as Figure S1, Figure S2, etc. No cost recovery is expected for online colour illustrations.

*Note that the total number of tables plus figures appearing in the print copy may not exceed six.*

Please indicate the optimum placement of all tables and figures within the text.

Both the Figures and the Tables should be organized into a separate file. All supplementary material must also be presented within separate file(s) (Supplementary Tables and/or Supplementary Figures).

### Short communications

These will be limited to a maximum of 1000 words of text, plus two figures or tables (or one of each). Section headings should normally be restricted to *Abstract*, *Experimental*, *Discussion*, *Acknowledgements*, *References*. This form of communication has been explicitly designed to reflect the format of poster presentations.

### Page proofs

Once typeset, the corresponding author will receive page proofs by e-mail as a .pdf file. You will be asked to return the corrections via email (no later than 4 days after receipt). There is also a copyright transfer form in the file; this needs to be signed and returned along with the offprint order.

### Offprints

With the .pdf proof, the corresponding author will also be e-mailed an offprint order form. If offprints of the paper are required, the appropriate form should be completed, using the price scale provided, and returned with the corrected proof to the proofreader. You will be provided with a final .pdf file by e-mail at no expense. You will also be sent a 'Terms and Conditions' form which outlines how you may use your .pdf file.

*Last updated June 2009*

# Plant Genetic Resources Characterization and Utilization

## Contents

Marker-assisted reduction of redundancy in a genebank collection of cultivated lettuce <i>R. van Treuren, E. C. de Groot, I. W. Boukema, C. C. M. van de Wiel and Th. J. L. van Hintum</i> . . . . .	95
The relic Criollo cacao in Belize – genetic diversity and relationship with Trinitario and other cacao clones held in the International Cocoa Genebank, Trinidad <i>Lambert A. Motilal, Dapeng Zhang, Pathmanathan Umaharan, Sue Mischke, Vishnarayan Mooleedhar and Lyndel W. Meinhardt</i> . . . . .	106
Impact of farmers' practices and seed systems on the genetic structure of common sorghum varieties in Kenya and Sudan <i>Ismail Y. Rabbi, Hartwig H. Geiger, Bettina I. G. Haussmann, Dan Kiambi, Rolf Folkertsma and Heiko K. Parzies</i> . . . . .	116
Short Communication	
Hybridization for increased yield and nutritional content of snake melon ( <i>Cucumis melo</i> L. var. <i>flexuosus</i> ) <i>Sudhakar Pandey, N. P. S. Dhillon, A. K. Sureja, Dilbag Singh and Ajaz A. Malik</i> . . . . .	127
Identification of <i>Aegilops</i> species with higher production of phytosiderophore and iron and zinc uptake under micronutrient-sufficient and -deficient conditions <i>Kumari Neelam, Vijay K. Tiwari, Nidhi Rawat, Sangharsh K. Tripathi, Gursharn S. Randhawa and Harcharan S. Dhaliwal</i> . . . . .	132
Assessment of the genetic diversity in cowpea ( <i>Vigna unguiculata</i> L. Walp.) germplasm from Ghana using simple sequence repeat markers <i>Aaron T. Asare, Bhavani S. Gowda, Isaac K. A. Galyuon, Lawrence L. Aboagye, Jemmy F. Takrama and Michael P. Timko</i> . . . . .	142
Diversity among different populations of a locally common rice ( <i>Oryza sativa</i> L.) landrace from north-western Indian Himalayas <i>S. Kumar, A. Pandey, I. S. Bisht, K. V. Bhat and P. S. Mehta</i> . . . . .	151
Short Communication	
Five fruit morphotypes of Russian olive ( <i>Elaeagnus angustifolia</i> L.) from Ladakh, India <i>Anup Raj, Mohammad Mehdi, Om Chand Sharma and Punam K. Sharma</i> . . . . .	159
Identification and evaluation of vegetable type pigeonpea ( <i>Cajanus cajan</i> (L.) Millsp.) in the world germplasm collection at ICRISAT genebank <i>H. D. Upadhyaya, K. N. Reddy, C. L. L. Gowda and Sube Singh</i> . . . . .	162
Distribution of genetic diversity in wild European populations of prickly lettuce ( <i>Lactuca serriola</i> ): implications for plant genetic resources management <i>C. C. M. van de Wiel, T. Sretenović Rajičić, R. van Treuren, K. J. Dehmer, C. G. van der Linden and Th. J. L. van Hintum</i> . . . . .	171
Current taxonomic composition of European genebank material documented in EURISCO <i>Theo van Hintum and Helmut Knüpfper</i> . . . . .	182
Book Review . . . . .	189
