Deja Vu is a sense that something has already suffered from before, or have someone from before and seen the like. In casual conversation with someone you can get this deja vu feeling that you have something to talk to or work, have seen or experienced.

In this article the authors describe a patient who is a phenomenon of deja vu was the introduction to the first psychotic episode

Additional tests are sent to a neurologist, and there werw changing in the EEG and neurologist started to treat him by antiepileptic drug, and monitored regularly.

First EEG showed bilateral acticity a little more left FC.

Working together psychiatrist and neurologist treated by regular medication the patient is now in a satisfactory clinical remission status.
