### NIST Handbook of Mathematical Functions

Companion to the Digital Library  
of Mathematical Functions

EDITED BY FRANK W. J. OLVER, DANIEL W. LOZIER,  
RONALD F. BOISVERT, AND CHARLES W. CLARK

Modern developments in theoretical and applied science depend on knowledge of the properties of mathematical functions, from elementary trigonometric functions to the multitude of special functions. These functions appear whenever natural phenomena are studied, engineering problems are formulated, and numerical simulations are performed. They also crop up in statistics, financial models, and economic analysis. Using them effectively requires practitioners to have ready access to a reliable collection of their properties.

This handbook results from a 10-year project conducted by the National Institute of Standards and Technology with an international group of expert authors and validators. It is destined to replace its predecessor, the classic but long-outdated NBS Handbook of Mathematical Functions, edited by Abramowitz and Stegun.

\$99.00: Hardback: 978-0-521-19225-5: 966 pp.  
\$50.00: Paperback: 978-0-521-14063-8

### Logical Foundations of Proof Complexity

STEPHEN COOK AND PHUONG NGUYEN

This book treats bounded arithmetic and propositional proof complexity from the point of view of computational complexity. The first seven chapters include the necessary logical background for the material and are suitable for a graduate course. The result is a uniform treatment of many systems in the literature.

\$80.00: Hardback: 978-0-521-51729-4: 492 pp.

Prices subject to change.

## **Executive Editor**

Ruslan Mitkov, University of Wolverhampton, UK

*Natural Language Engineering* meets the needs of professionals and researchers working in all areas of computerised language processing, whether in theoretical or descriptive linguistics, lexicology, computer science or engineering. The journal bridges the gap between traditional computational linguistics research and the implementation of practical applications with potential real-world use.

## Instructions for contributors

### Editorial policy

*Mathematical Structures in Computer Science (MSCS)* is a journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from logic, algebra, geometry, category theory or other areas of logic and mathematics form a basis for the work. The journal also welcomes applications to computing based on the use of specific mathematical structures (e.g. topological and order-theoretic structures) as well as on proof-theoretic notions or results. In addition, it is interested in contributions in new interdisciplinary fields bridging computer science, quantum physics, mathematics and information theory. In particular, papers on mathematical formalisms for quantum computation, quantum information processing and communication will be considered.

The purpose of the journal is to increase the circulation of new very high standard results in fast growing areas which are currently influencing various aspects of actual computing. Indeed, this journal is not meant to be only a 'theory journal' but, by choosing as a theme the use of mathematical methods of Computer Science independently of their area of application, it aims to highlight connections among different topics and to encourage applications of theoretical contributions.

In order to promote the use of mathematical methods in computer science, expository and introductory papers are welcome, provided that there is a clear connection to computational issues or they investigate mathematical structures whose relevance to computer science is well established. However, these contributions should be directed to the broad audience of computer scientists to which this journal is addressed. Equally, discussions of a methodological or philosophical nature concerning the foundation of Computer Science are of interest for the journal.

### Submission of manuscripts

Papers may be submitted to any member of the Editorial Board. A file .pdf should be sent accompanied by the author's address, telephone and fax number, and e-mail address.

A copy of the paper together with the name of the editor chosen should also be sent to the Editor-in-Chief who will record the submission.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The publisher encourages submission of papers written in LaTeX using the *MSCS* LaTeX style file. The LaTeX 2.09 style file *mcssty* together with a guide to its use *mcsstyguide.tex*, or the corresponding LaTeX 2e file *mcscls* are available via anonymous ftp from the Cambridge University Press site at <ftp.cup.cam.ac.uk> in the directories `/pub/texarchive/journals/latex/mcssty` or `/pub/texarchive/journals/latex/mcscls`. In the directory `/pub/texarchive/journals/latex/mcssty` you will find a concatenated file called *mcsall*. This file contains *readme.txt*, *mcssty* and *mcsstyguide.tex*. If you use TeX *mcsstyguide.tex* you will get a full set of instructions for using the style file. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact [texsupport@techbooks.com](mailto:texsupport@techbooks.com). While use of the *MSCS* LaTeX style file is preferred, ordinary LaTeX or plain TeX files can also be accepted.

**On final acceptance of their paper**, authors should make accessible to the Editor-in-Chief (downloadable) the LaTeX source code including all figures (line figures only), a file .pdf and author-defined macro and style files, together with a hard copy produced using the same file. Discs should be in Apple Mac or PC format and will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

### Layout of manuscripts

Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 300 words and should end with a brief concluding section.

### Illustrations

Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions should be attached separately.

### References

The Harvard system of references should be used. In the text, a reference should be quoted by the author's name and date in parentheses, in date order, e.g. (Smith 1983; Jones and Jones 1985; Hunter 1986a,b). Where there are three or more authors, the first name followed by et al. should be used. A full list of references should be given at the end of the main text, listing, in alphabetical order, surname of author and initials; year of publication (in parentheses); article title; journal name abbreviated in accordance with the *World List of Scientific Periodicals* (4th edn); volume number; inclusive page numbers. For books and conference proceedings, place of publication and publisher (and Editor(s) if appropriate) should be included.

### Proof Reading

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

### Offprints

Extra offprints may be purchased from the publisher if ordered at proof stage.

## CONTENTS

### SPECIAL ISSUE: DOMAINS

- Preface for the special issue on domains 105  
BERNHARD REUS, ACHIM JUNG, KLAUS KEIMEL  
AND THOMAS STREICHER
- Domain representations of spaces of compact subsets 107  
ULRICH BERGER, JENS BLANCK AND PETTER KRISTIAN KØBER
- Selection functions, bar recursion and backward induction 127  
MARTÍN ESCARDÓ AND PAULO OLIVA
- De Groot duality and models of choice: angels, demons and nature 169  
JEAN GOUBAULT-LARRECQ
- Some reasons for generalising domain theory 239  
MARTIN HYLAND
- The limit–colimit coincidence theorem for  $\mathcal{Q}$ -categories 267  
MATEUSZ KOSTANEK AND PAWEŁ WASZKIEWICZ
- On universal algebra over nominal sets 285  
ALEXANDER KURZ AND DANIELA PETRIŞAN
