

CORRIGENDUM

P. HALL

(Received 4 November 1975)

My attention has been called to the fact that Theorem E1, quoted on p. 445 of my paper "On the embedding of a group in a join of given groups", *J. Austral. Math. Soc.* **17** (1974), 434–495, is practically identical with Théorème I (p. 47) of the second part of the three-part paper "Produit complet des groupes de permutations et problème d'extension des groupes" by M. Krasner and L. Kaloujnine, *Acta Sci. Math. Szeged* **14** (1951), 39–66. My oversight in referring only to the third part of this important work, which contains the special case often quoted as the Kaloujnine-Krasner Theorem, is regrettable: it is the much more general and definitive Théorème I which should be equally or better known by that name.
