"We have experimentally proved that Listerine is a powerful antiseptic, preventing the development of bacteria and decomposition of vegetable infusions."—*British Medical Journal*, May 3, 1890.

LISTERINE

*A safe, non-poisonous, unirritating
antiseptic solution*

LISTERINE is particularly useful in the treatment of abnormal conditions of the mucosa, and admirably suited for a wash, gargle, or douche, in catarrhal conditions of the nose and throat.

LISTERINE in proper dilution may be freely and continuously used without prejudicial effect, either by injection or spray, in all the natural cavities of the body.

LISTERINE embodies a two-fold antiseptic effect, in that after the evaporation of its volatile constituents—thyme, eucalyptus, mentha, gaultheria, and ethyl alcohol—a film of boracic and benzoic acids remains upon the surface to which Listerine has been applied, affording more prolonged antiseptic protection.

LISTERINE is a trustworthy surgical dressing; it has no injurious effect upon the tissues in which the healing process is going on.

LISTERINE in teaspoonful doses will often afford relief in fermentative dyspepsia, and is largely prescribed, with excellent results, in the various forms of diarrhoea, occurring in infants and adults.

LISTERINE literature, including special pamphlets upon *Respiratory Diseases*, may be had, by physicians, upon application to

The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

A. LOGAN TURNER AND J. S. FRASER

ASSISTED BY

DOUGLAS GUTHRIE AND IRWIN MOORE

1. Original Articles are accepted on the condition that they have not been published elsewhere.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked and no additional matter should be added.

4. The order for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied, on which the price of the reprints is stated.

5. Authors of Original Communications on Oto-Laryngology in other Journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

6. Editorial Communications should be addressed to "EDITORS, *Journal of Laryngology*, c/o Messrs OLIVER AND BOYD, Tweeddale Court, Edinburgh."

7. The Annual Subscription is Forty Shillings, post free, and is payable in advance.

8. Single copies of back numbers, both of the present and the previous series, are on sale at Four Shillings each.

9. An Annual Subscription can be commenced with any number of the Journal, and the preceding numbers of the current year can be purchased at Four Shillings each.

UNITED STATES OF AMERICA

Orders for this Journal, for single parts or yearly subscriptions, can be sent either through a local bookseller, or to Messrs G. E. STECHERT & Co., 31-33 East 10th Street, New York.

DISEASES OF THE NOSE, THROAT, AND EAR FOR PRACTITIONERS AND STUDENTS

Edited by

A. LOGAN TURNER, M.D., F.R.C.S. (Ed.)

Senior Lecturer on Diseases of the Ear, Nose, and Throat, University of Edinburgh

With the collaboration of

J. S. FRASER, M.B., F.R.C.S. (Ed.)

J. D. LITHGOW, M.B., F.R.C.S. (Ed.)

W. T. GARDINER, M.C., M.B., F.R.C.S. (Ed.)

G. EWART MARTIN, M.B., F.R.C.S. (Ed.)

Lecturers on Diseases of the Ear, Nose, and Throat, University of Edinburgh

and

DOUGLAS GUTHRIE, M.D., F.R.C.S. (Ed.)

Lecturer on Diseases of the Ear, Nose, and Throat, School of Medicine of the Royal Colleges, Edinburgh

FOR a number of years, the volume on *Diseases of the Throat, Nose, and Ear*, written by the late Dr W. G. PORTER, supplied a much-felt want, and the fact that it passed through three editions in a comparatively short space of time, was sufficient testimony of its popularity.

Seven years have now elapsed since Dr Porter fell in the service of his country, and the present volume, dedicated to his memory, is produced as the joint work of those engaged in the teaching and practice of the speciality in the Edinburgh Medical School.

While the writers have endeavoured to preserve the main object underlying Dr Porter's original book, the subject matter has been expanded along new lines, which may be justly regarded as increasing the usefulness of the volume. For this purpose, an illustrated description of the clinical anatomy of the various regions has been introduced. A further addition will be found in the detailed account given of many of the minor and major operations. A section on Endoscopy has also been added.

A special feature has been made of the illustrations, and no trouble has been spared to make these at once informative and exhaustive. It has been found necessary to almost treble them in number. Student and Practitioner alike should find it a practical, comprehensive, and up-to-date guide.

BRISTOL: JOHN WRIGHT & SONS LTD. LONDON: SIMPKIN & CO. LTD.

Central London Throat, Nose, and Ear Hospital GRAY'S INN ROAD (Near King's Cross Stations)

DAILY CLINICS.

OVER 11,000 NEW PATIENTS LAST YEAR. 50,000 ATTENDANCES.

IN-PATIENT DEPARTMENT, 43 BEDS.

CLINICAL ASSISTANTS

Are appointed from among those gentlemen who have enrolled themselves for attendance on the practice of the Hospital.

ATTENDANCE OF STAFF

		O.-P. CLINIC.	I.-P. OPERATIONS.
Dr ABERCROMBIE	Thursday, 2 P.M.	Wednesday, 2 P.M.

HEMOPLASTIN

(HÆMOSTATIC SERUM)

Remarkably efficacious in all forms of hæmorrhage

HEMOPLASTIN is a sterile fluid derived from normal serum of horses and cattle. It is composed principally of prothrombin and thrombokinase, together with a third substance known as anti-antithrombin. These constituents are in physiologically balanced solution ready for immediate use. It retains its properties for about three years.

HEMOPLASTIN is indicated in the treatment of all types of hæmorrhage, particularly those depending upon imperfect coagulation of the blood. It has proved of great value in pulmonary hæmorrhage, and in hæmorrhage incidental to surgical procedures, tonsillectomy, etc. Its administration to hæmophilic subjects about to undergo operations is a valuable prophylactic measure.

HEMOPLASTIN may be administered intravenously or subcutaneously. The dose is 1 to 2 c.c. every 4 to 6 hours until the hæmorrhage is controlled. The prophylactic dose is 2 c.c. one hour before the operation. Hemoplastin may also be applied on sterile gauze to bleeding surfaces.

Hemoplastin (P., D. & Co.) is supplied in bulbs containing 2 c.c.
