

CAMBRIDGE

Early Lexical Development

ESTHER DROMI

This comprehensive study of a crucial period in children's language development, between the emergence of the first word and the appearance of first word combinations, is remarkable both for its meticulous data and for the significant new findings it presents. It is a major contribution to our knowledge about how children establish their productive lexicons and to child language research in general.

From First Words to Grammar

Individual Differences and Dissociable Mechanisms

ELIZABETH BATES, INGE BRETHERTON and LYNN SNYDER

What constitutes 'normal' language development? *From First Words to Grammar* presents the first comprehensive study of this process in a sample of children large enough to permit a systematic analysis of individual differences in style and rate of development. The results throw important new light on how we view the structure of language, and its breakdown in normal and abnormal conditions.

NOTES FOR CONTRIBUTORS

Papers, notes and reviews should be sent to Dr A. Cruttenden, Department of Linguistics, University of Manchester, Manchester, M13 9PL, UK. They should normally be written in English. Major articles should not exceed twenty printed pages.

Three copies of the typescript should be submitted, and of any revisions or resubmissions. Contributions should be clearly typed with double spacing, on one side of the paper only, using a conventional size of paper, preferably A4 (or 21.6 by 28 cm). Authors should hold one copy for correction of proofs. Footnotes should not be used unless absolutely necessary, and should be listed on a separate sheet (double-spaced) at the end of the article. Tables and figures should be drawn on separate pages at the end of the article. Each table/figure should have a title, and there should be an indication in the body of the text as to placement. Tables and figures should each be numbered independently of examples of utterances. A separate title-page should include the title, author's name and affiliation, together with an asterisked footnote which should include acknowledgements and an address for correspondence. Titles should be so worded that the first part may be used as a running headline (with a maximum length of 40 characters, including spaces). An abstract of the article, giving aims, general method, and principal conclusions, should be typed on a separate sheet (max. 120 words for articles and 60 words for notes).

Chronological age should be stated in years, months and (where needed) days as follows; 4;5.17. Cited forms should be underlined to represent italicization in print. Translational 'meanings' should be placed within single quotation marks. Emphasis should be marked by the use of small capitals. Phonetic transcriptions should, wherever possible, employ the symbols and conventions of the IPA; they must never be used in footnotes, and should in no case be narrower than absolutely necessary for the purpose.

References are to be made in the text thus; (Neisser 1967: 222). If the author's name is part of the text, the following form should be used; 'Piaget (1967: 131) investigates...'. When a work written by three or more authors is referred to, all names should be given in the first citation, with an ampersand linking the last two, e.g. (Fraser, Bellugi & Brown 1963); in subsequent citations the first name only should be given, with 'et al.' added. A group of references within the text should be date-ordered.

All works referred to should be listed at the end of the article, double-spaced and in alphabetical order. The titles of journals should be given in full. Examples of references (note the use of punctuation marks) are:

- Brown, R. (1973). *A first language: the early stages*. Cambridge MA: Harvard University Press.
- Crystal, D. (1986). Prosodic development. In P. Fletcher & M. Garman (eds), *Language acquisition: studies in first language development*. Second edition. Cambridge: C.U.P.
- Clark, R. (1974). Performing without competence. *Journal of Child Language* 1. 1-10.
- Ferguson, C. A. & Slobin, D. I. (eds) (1973). *Studies of child language development*. New York: Holt, Rinehart & Winston.

With the exception of the title-page, book reviews should be submitted in the same form as articles. (Three copies should be sent.) The heading should be in the following form:

M. BOWERMAN, *Early syntactic development: a cross-linguistic study with special reference to Finnish*. Cambridge: C.U.P., 1973. Pp. xii + 302.

and the ending as follows:
