Cover image

In this issue, Patients' blogs are the subject of an editorial by Wuyts *et al* (pp. 361–363), while use of an online discussion forum by young people who self-harm was studied by Jones *et al* (pp. 364–368). These papers, and a commentary by Powell (pp. 368–369), discuss the benefits and risks of these relatively new modes of healthcare communication.
