

QUATERNARY RESEARCH

Quaternary Research is an international journal devoted to the advancement of the interdisciplinary understanding of the Quaternary Period. We aim to publish articles of broad interest with relevance to more than one discipline, and that constitute a significant new contribution to Quaternary science. The journal's scope is global, building on its nearly 50-year history in advancing the understanding of earth and human history through interdisciplinary study of the last 2.7 million years. Research areas include geoarcheology, geochemistry and geophysics, geochronology, geomorphology, glaciology, neotectonics, paleobotany and paleoecology, paleoclimatology, paleogeography, paleohydrology, paleontology, paleoceanography, paleopedology, Quaternary geology, volcanology and tephrochronology.

Submit manuscripts online at <http://editorialmanager.com/qr>. See instructions for submitting your manuscripts at <https://www.cambridge.org/core/journals/quaternary-research/information/guide-for-authors>.

Subscription Information: *Quaternary Research* published two volumes per year with three issues each. The journal is published on behalf of Quaternary Research Center by Cambridge University Press, One Liberty Plaza, 20th Floor, New York, NY 10006, USA. Annual subscription rates for Volumes 89 and 90 (2018): Institutional rate, print only: \$1,312.00 (£795.00 + VAT). Institutional rate, online only: \$1,287.00 (£780.00 + VAT). Institutional rate, print and online: \$1,365.00 (£827.00 + VAT). For subscriptions, renewals, and address changes, please visit <https://www.cambridge.org/core/journals/quaternary-research/subscribe>. Email subscriptions_newyork@cambridge.org if you are in the Americas or journals@cambridge.org for the rest of the world.

CONTENTS

RESEARCH ARTICLES

- 375–393 Multiple glacial advances in the Rangitata Valley, South Island, New Zealand, imply roles for Southern Hemisphere westerlies and summer insolation in MIS 3 glacial advances**
James Shulmeister, Glenn D. Thackray, Tammy M. Rittenour, and Olivia M. Hyatt
- 394–412 Absence of Saharan dust influence on the strontium isotope ratios on modern trees from the Bahamas and Turks and Caicos Islands**
Rick Schulting, Mike Richards, John Pouncett, Bryan Naqqi Manco, Ethan Freid, and Joanna Ostapkowicz
- 413–424 Complexity of factors influencing the spatiotemporal distribution of archaeological settlements in northeast China over the past millennium**
Dan Jia, Yikai Li, and Xiuqi Fang
- 425–431 Increased frequency of torrential rainstorms during a regional late Holocene eastern Mediterranean drought**
Marieke Ahlborn, Moshe Armon, Yoav Ben Dor, Ina Neugebauer, Markus J. Schwab, Rik Tjallingii, Jawad Hasan Shoqir, Efrat Morin, Yehouda Enzel, and Achim Brauer
- 432–445 Millennial-scale decline in coho salmon abundance since the middle Holocene in a coastal Oregon watershed, USA**
Daniel G. Gavin, Jennifer E. Kusler, and Bruce P. Finney
- 446–458 Early–middle Holocene ecological change and its influence on human subsistence strategies in the Luoyang Basin, north-central China**
Junna Zhang, Zhengkai Xia, Xiaohu Zhang, Michael J. Storz, Xiaozhong Huang, Jianye Han, Hong Xu, Haitao Zhao, Yifu Cui, John Dodson, and Guanghui Dong
- 459–477 Another perspective on the age and origin of the Berelyokh mammoth site (northeast Siberia)**
Anatoly V. Lozhkin and Patricia M. Anderson
- 478–493 Optically stimulated luminescence ages from the Lake Agassiz basin in Manitoba**
James T. Teller, Roderick A. McGinn, Haresh M. Rajapara, Anil D. Shukla, and Ashok K. Singhvi
- 494–504 Marine Isotope Stage 3 paleotemperature inferred from reconstructing the Die Shan ice cap, northeastern Tibetan Plateau**
Hang Cui, Jie Wang, Beibei Yu, Zhenbo Hu, Pan Yao, and Jonathan M. Harbor
- 505–510 No evidence from the eastern Mediterranean for a MIS 5e double peak sea-level highstand**
Barbara Mauz, Zhixiong Shen, Noureddine Elmejdoub, and Giorgio Spada
- 511–519 Glacial–interglacial change in chlorite concentration from the Lingtai section in the Chinese Loess Plateau over the past 1.2 Ma and its possible forcing mechanisms**
Tong He, Lianwen Liu, Yang Chen, Xuefen Sheng, Junfeng Ji, and Jun Chen
- 520–532 Cryptotephra from Lipari Volcano in the eastern Gulf of Taranto (Italy) as a time marker for paleoclimatic studies**
Valerie Menke, Steffen Kutterolf, Carina Sievers, Julie Christin Schindlbeck, and Gerhard Schmiidl
- 533–562 A multidisciplinary study of ecosystem evolution through early Pleistocene climate change from the marine Arda River section, Italy**
Gaia Crippa, Andrea Baucon, Fabrizio Felletti, Gianluca Raineri, and Daniele Scarponi
