# The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR  
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

## *United States of America*

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

For children  
**PENBRITIN**  
is the safer broad spectrum antibiotic

—the only one which is both oral and bactericidal, with the additional advantage of safety for all ages. Whenever broad spectrum therapy is required, from the neonate to the older child, Penbritin affords the safety of a penicillin. No interference with the calcification of teeth and bone, or significant change in blood picture has been reported in over 700 published papers on Penbritin.

**Penbritin is effective**

because it is bactericidal, highly active against a wide range of pathogens and well absorbed after oral administration giving high blood, tissue and urine levels. These factors mean outstanding effectiveness in the treatment of recurrent chest infections, bronchitis, pneumonia, tonsillitis, otitis media, cystitis, pyelonephritis and other bacterial diseases.

**And acceptable**

because Penbritin Syrups are palatable, pleasant tasting liquids, well liked and well tolerated by children of all ages.  
Crushable paediatric tablets are also available.

**Dosage**

**Under 2 years** 62.5- 125mg. 6 hourly. **2-10 years** 125-250mg. 6 hourly

**Availability (for paediatric use)**

Penbritin Syrup  
(125mg./5ml.) 60ml.

Penbritin Syrup forte  
(250mg./5ml.) 60ml.

Paediatric tablets  
(125mg. scored)

# BÉKÉSY ACCESSORY

For the very first time a fully automatic unit has been made available for a Clinic Audiometer, making the combined units into a true BÉKÉSY Audiometer.

This automatic accessory is being made for the PETERS SPD/5 CLINIC AUDIOMETER, which has a continuous frequency range and continuously variable attenuation. The result is therefore a true Békésy audiometer.

It can be attached to or detached from the audiometer in under one minute so that the two units together offer the facilities of an advanced clinic audiometer or Békésy audiometry at will.

It can be fitted to any existing SPD/5 Audiometer.

Please write for full details and demonstration to :

### Tonsillitis Pharyngitis

Post-operative wound infections  
Burns  
Skin graft protection

Septicaemia  
Acute endocarditis

Staphylococcal enterocolitis

Staphylococcal urinary tract infections

Staphylococcal meningitis

ORBENIN (cloxacillin sodium B.P.) is a penicillin active against virtually all Gram-positive organisms, including staphylococci,  $\beta$ -haemolytic streptococci and pneumococci, irrespective of their resistance to other antibiotics.

It is encouraging that the widespread use of Orbenin in hospitals has not resulted in the emergence of resistant strains.

More than 300 references in the World Literature testify to the excellent clinical results obtained with Orbenin in a wide variety of Gram-positive infections.

Detailed literature is available on request.

### Dosage:

Two capsules (500mg.) or one vial (250mg.) q.i.d.

What do  
you do  
about  
a case  
like this?

Now, for the profoundly deaf child and the adult with a severe fragmentary loss—a completely new hearing aid. Available only from Ingrams, the new Zenith 'Vocalizer' enables hearing correction to be maintained down to frequencies previously beyond the scope of all but desk appliances. Because of its low frequency response (the 'Vocalizer' actually amplifies down to one hundred cycles), it can prove helpful for children and adults with some residual hearing for low frequencies but a total loss for the medium high frequencies. It incorporates new facili-

ties to provide for Loop Listening at the same time that the child can hear his own voice for speech training. Because the 'Vocaliser' is light yet robust, he can continue to use the same aid at home as he uses at school.

**WRITE TO INGRAMS**, sole agents for Zenith hearing aids throughout Britain, who will gladly provide full details of this and any other hearing aid from their comprehensive range of 26 different makes. Even if the case seems hopeless—Ingrams could have the answer. You can refer your patient to Ingrams with confidence.

# Triominic

Oral Nasal Decongestant **WANDER**

'Triominic' timed-release tablets and orange-flavoured syrup contain antihistamines and a decongestant in balanced proportions to ensure relief from symptoms of nasal allergy for between 6 and 8 hours. The active constituents of 'Triominic'—the original oral decongestant—reach the nasal mucosa systemically. This obviates the rebound congestion which may follow the topical use of vasoconstrictors.

**Formula per timed-release tablet.**

Phenylpropanolamine hydrochloride.....	.50 mg.
Mepyramine maleate B.P.....	.25 mg.
Pheniramine maleate.....	.25 mg.

S7

**'Triominic' is also available as an orange-flavoured syrup.**

Basic N.H.S. prices: 50 tablets 5/9½;  
4 fl. oz. 2/2 (ex dispensing packs).

## A CHOICE SELECTION IN LARYNGOLOGY & OTOLOGY

**ALARYNGEAL SPEECH** by **William M. Diedrich** and **Karl A. Youngstrom**, both of *University of Kansas Medical Center, Kansas City*. The authors report on an extensive research study and describe in detail clinical observations and rehabilitation procedures. *The unique illustrative material presented facilitates a visual understanding of the complex processes of alaryngeal speech.* Physical and psychological needs as well as communication needs of the laryngectomee are considered. A new concept for developing oesophageal speech through the use of the artificial larynx is presented. *June '66, about 282 pp., 322 il., 51 tables.*

**ROENTGENOGRAPHY AND ROENTGENOLOGY OF THE MIDDLE EAR AND MASTOID PROCESS** by **Lewis E. Etter**, *Univ. of Pittsburgh*. With the collaboration of **Lawrence C. Cross** and **Merle J. Stuart**, both of *Western Psychiatric Institute and Clinic, All of Pittsburgh*. The author demonstrates how a routine acceptable x-ray examination of the temporal bone, middle ear, and mastoid process can be performed using six pairs of films, properly exposed by precision roentgenography, to show all that is needed to arrive at a diagnosis of disease in these structures. *'65, 168 pp. (8½ × 11), 157 il., \$9.75.*

**EXTERNAL OTITIS: Diagnosis and Treatment** by **Edley H. Jones**, *Univ. of Mississippi, Jackson. (Ret.)*. Heretofore unpublished clinical investigations are presented including a particularly effective study on the prevention of "swimming pool ear". Clinical findings are correlated with pathology and well illustrated with photomicrographs. Basic principles of general and local therapy which apply to all forms of external otitis are fully discussed. *'65, 264 pp., 89 il. (26 in colour), 19 tables, \$9.50*

**RADIATION THERAPY IN THE MANAGEMENT OF CANCERS OF THE ORAL CAVITY AND ORO-PHARYNX** by **Gilbert H. Fletcher** and **William S. MacComb**. With the collaboration of **Alando J. Ballantyne**. *Physics section* by **Robert J. Shalek** and **Marilyn A. Stovall**. *All of the Univ. of Texas. '62, 408 pp., 346 il. (Amer. Lec. Radiation Therapy edited by Milton Friedman), \$16.50*
