

Communicating in Science: Writing and Speaking

VERNON BOOTH

Writing scientific papers and giving talks at meetings and conferences are essential parts of research scientists' work. This short, straightforwardly written book, which is full of useful information, will help workers in all scientific disciplines to present their results effectively. The first chapter is about writing a scientific paper and is a revision of an essay that won first prize in a competition organized by Koch-Light some years ago. Later chapters discuss the preparation of typescripts, speaking at meetings and writing theses. There are also chapters addressed particularly to those scientists whose first language is not English and to those in North America. The last chapter gives information about dictionaries, style books and other literature.

Dr Booth has for many years written and spoken about his own work and has edited other scientists' work; he draws his examples from a range of subjects.

The Cambridge Guide to the Material World

RODNEY COTTERILL

Rodney Cotterill's *The Cambridge Guide to the Material World* provides a unique single-volume introduction to the materials found on this planet, both organic and inorganic.

The opening sections are devoted to such fundamental topics as the nature of the atom, the structure of molecules and the common states of matter. There then follow chapters on specific classes of material, notably ceramics, glasses, metals, conductors and insulators, liquid crystals, and natural and synthetic polymers. Minerals, water and the living cell are considered in detail and the book concludes with a characteristically lucid discussion of the molecular structure of plant and animal life. Each chapter is packed with fascinating examples and analogies, and closes with a useful summary of what has gone before.

- ★ Numerous full colour photographs and illustrations
- ★ Text and illustrations carefully integrated to ensure maximum clarity and readability
- ★ Topics requiring special attention prominently highlighted in display panels

297 x 210 mm 352 pp. 190 illustrations including 90 in full colour and 30 in two colours

INFORMATION FOR CONTRIBUTORS TO QUARTERLY REVIEWS OF BIOPHYSICS

1. *Quarterly Reviews of Biophysics* is the official journal of the International Union for Pure and Applied Biophysics. As such, its primary aim is to provide a forum for general and specialized communication between biophysicists working in different areas. This will normally be achieved by inviting authors who have made significant contributions to give a critical and readable account of recent progress in their special fields. Shorter and even controversial articles discussing topics of particular current interest will also be published.

2. Reviews should preferably be written in English. The style of presentation must be concise, with only key references.

3. Three copies of manuscripts are required. They should be typed in double spacing with a margin of 4 cm all round. The position of tables and illustrations should be indicated in the text. Tables and legends for illustrations should be typed on separate pages. A table of contents should be provided for printing at the head of the article.

4. In the text, the references should be to authors and year. When a paper cited has three or more authors the style Smith *et al.* (1973) should be used on all occasions. At the end of the paper, references should be listed alphabetically, with the full title of each paper, and the first and last pages. Abbreviations of journal titles should follow the latest edition of the *World List of Scientific Periodicals*. For example

BERNAL, J. D. (1967). *Origin of Life*. London: Weidenfeld and Nicolson.

EIGEN, M. (1968). New looks and outlooks on physical enzymology. *Q. Rev. Biophys.* 1, 3-33.

5. Drawings should be in Indian ink on tracing paper. They should be drawn roughly twice the size of the finished block. Explanations should as far as possible be placed in the legends. Lettering for photographs should either be on a duplicate print or on an accurately registered overlay.

6. The author will receive only one set of page proofs for correction. Fifty reprints of each review will be provided free of charge. Additional copies may be purchased.

QUARTERLY REVIEWS OF BIOPHYSICS

Reviews on the following topics will appear in forthcoming issues:

Amino acid sequence, haem-iron coordination geometry and functional properties of mitochondrial and bacterial c-type cytochromes

HANS SENN and KURT WÜTHRICH

Chaos in biological systems

LARS FOLKE OLSEN and HANS DEGN

Volterra representation and Wiener-like identification of non linear systems: scope and limitations

GÜNTHER PALM and BERTRAM PÖPEL
