The authors apologise that within the introduction of the published article the sentence ‘*Quality of life and mental health in this population have not previously been studied in Norway*’ needed further clarification and the inclusion of additional references.

The actual and preceding sentence should read as follows:

However, specific population-based data on quality of life issues and mental health in adolescents with Fontan circulation are limited, constituting a knowledge gap. Quality of life and mental health have been studied in our institution in the general paediatric CHD population previously (47–49), but Fontan-specific studies have not been performed in Norway before.
