

The Philosophy of Mathematics

STEPHEN KÖRNER, M.A., PH.D.

Professor of Philosophy in the University of Bristol

This book explains the principal tenets of some of the more important philosophical theories about the content and context of mathematics. It then discusses the difference between conflicting *theses* about what mathematical systems are and conflicting *programmes* concerning what sort of mathematical systems should be constructed. These considerations lead to an independent discussion of the two main problems of the philosophy of mathematics. 12s. 6d.

The Idea of Order

*Contributions
to a Philosophy of Politics*

BY HANS BARTH

May 1960, viii + 210 pp.,
Dfl 15.75 or 31½ s.

Human society requires an order as realized, for example, in the state. Philosophy, the science of knowledge, has always considered the nature of this order one of the most important objects of its investigations.

It either approves or condemns the existing social or political order: this is the meaning and purpose of the great works of political and social criticism in the Western tradition. Politics, for its part, is not content with the mere factuality of order; the exercise of political power requires philosophical foundation and legitimation. Thus philosophy and politics, seemingly so unrelated, are fundamentally interrelated concepts.

An Introduction to Metaphysics

MARTIN HEIDEGGER

Translated by RALPH MANHEIM

Martin Heidegger here investigates the meaning of being and man's understanding of it as they are recorded in philosophy and poetry, and, above all, in the language that underlies them both. (*Yale University Press*) 22s 6d net

DUNS SCOTUS

Philosophical Writings

edited by ALLAN WOLTER O.F.M. This selection of the writings of Duns Scotus is taken from his *Ordinatio*, better known as his *Oxford Commentary on the Sentences of Peter Lombard*, and is here printed in Latin with an English translation. It presents his views on the chief aspects of the questions concerned with God and the human soul. Two questions deal with the existence and unicity of God, two questions with the human soul, one concerning its spirituality and its immortality, the other its ability to attain certain knowledge. One half-tone illustration.
