

# STEREO PAIRS

Stereo pairs have for many years been used as visual aids. Aerofilms have an exclusive library—in fact, the only one of its kind in the world, covering many subjects including archaeology, towns, villages, geology, communications, rivers and valleys. Send for our folder "Aerofilms Stereo Pairs" which lists the most popular subjects for teaching purposes. Prices: Black and white—from £1.37 to £2.75 per pair; colour—from £4.00 to £11 per pair, all inc. VAT. The above prices are according to quantity ordered at the same time.

## Aerofilms REMOTE SENSING SET and EARTH SATELLITE IMAGERY

Methods of airborne data sensing are no longer limited by the height that an aircraft can fly or to black and white conventional photographs. **AEROFILMS REMOTE SENSING SET** brings to you examples of many of these techniques. 7 different processes are illustrated with 29 photographs including 7 of them in colour and 5 Stereo Pairs. Price £35.00 (+V.A.T.), send for free technical data.

### EARTH SATELLITE IMAGERY.

Most of the British Isles is covered in 4 spectral bands. Prints from £4.00 each (+V.A.T.), send for free coverage diagram.

# **A Geology for Engineers**

*Sixth Edition*

**FGH BLYTH AND MH DE FREITAS**

The issue of a sixth edition of this book bears witness to the esteem in which it is held by generations of engineers and geologists. Under joint authorship, the book has been extensively revised to include much new information. All units, except those quoted from actual case histories conform to the SI.

Much new information is presented on geological features of relevance to the excavation of materials (including drilling), underground works, dam construction, reservoirs (above and below ground) and to industrial and urban development of land.

All chapters conclude with a comprehensive reference list, and many have additional notes expanding on the preceding text discussion. Sources of geological information are listed in the Appendix.

To be published July

Cloth £7.50 net Paper £3.75 net

## NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, Geological Magazine, Sedgwick Museum, Downing Street, Cambridge, CB2 3EQ, England.

All contributions, whether articles, correspondence or reviews, must be typed in duplicate on one side of the paper, double spaced throughout, with a wide margin on the left of each page and a narrower margin on the right. Any minor corrections should be made neatly in the typescript, leaving the margins clear.

Articles must be accompanied by a brief summary. Contributions should follow the general style of papers in recent issues of the Magazine and the principles laid down in *Notes to Authors* (*Proc. Geol. Soc. Lond.*, No. 1627. Oct. 1965). Headings should be set out clearly, but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; sub-headings should be numbered 2.a, 2.b, etc., and tertiary headings 2.a.1., 2.a.2. No cross references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.1. The total length of a paper should not in general exceed 20 pages of the Geological Magazine; preference and priority are given to short papers. The accuracy of references is the responsibility of authors. References must be double spaced and abbreviated in the form of the *World List of Scientific Periodicals* 4th Edition as far as possible, e.g. Lapworth, C. 1878. The Moffat Series. *Q. Jl geol. Soc., Lond.* **34**, 240–343. Books should be cited briefly as: Burns, R. G. 1970. *Mineralogical applications of crystal field theory*. 224 p., C.U.P., London. Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless in the press.

Illustrations must be drawn to allow reduction to maximum size of 165 mm × 110 mm; originals must not exceed 495 mm × 330 mm and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1 mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 2, 2a, etc.), and halftone plates will be referred to (also in arabic) as Plates 2, 2a, etc. Folding plates will not be accepted. Captions for figures and plates must be typed on separate sheets.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges.
