## The Ecology of Marine Sediments

An Introduction to the Structure and Function of Benthic Communities

JOHN S. GRAY

This book analyses the patterns found in benthic communities and relates them to current ecological theory. The structural properties of communities considered cover patterns of individuals and species, niche theory, diversity and stability, the question of whether or not true communities exist, and the discussion of factors that control the structure of benthic communities. The effects of pollution are discussed in terms of how organisms adapt to it, and the functional organisation of communities is also considered. Students of marine biology at undergraduate and postgraduate level will find Professor Gray's book of great interest.

## Weddell Seal, Consummate Diver

GERALD L. KOOYMAN

Dr Kooyman describes the behaviour patterns and analyses the physiology of the Weddell seal, an animal that holds a unique niche in the world's ecology by occupying the most southern latitude of any mammal on a permanent basis. Study of this remarkable animal, which can dive to 600 metres and remain submerged for more than one hour, has provided important insights into methods of animal navigation, respiration and metabolism, with applications to human diving physiology.

## Stress and Fish

edited by A. D. Pickering

*September/October 1981, xiv + 368pp., £24.60 (UK only) / \$59.50, 0.12.554550.9*

This book extends our knowledge by presenting original research in the context of a detailed review of the existing information. The endocrinological/physiological responses of fish to stress, fundamental to our understanding of the subsequent performance of fish, are given particular attention as are the problems of stress associated with intensive fish cultivation and the harmful influences of man's activities on the aquatic environment.

## Aquarium Systems

edited by A. D. Hawkins

*September/October 1981, x + 452pp., £27.80 (UK only) / \$67.00, 0.12.333380.6*

This book was written as a practical guide to fish-keeping in the laboratory and is the result of collaboration between working scientists with first-hand experience in the subjects they have presented. It considers the basic aspects of aquarium design and construction, the supply of aquarium water and its treatment to make it suitable for the fish, the choice of materials for building the aquarium in order to minimize corrosion and contamination of the water, and other practical aspects of fish husbandry.

# THE MARINE BIOLOGICAL ASSOCIATION OF THE UNITED KINGDOM

THE ASSOCIATION was founded in 1884 to promote accurate researches leading to the advancement of zoological and botanical science and to an increase in our knowledge of the food, life, conditions and habits of British fishes. The work of the Association is controlled by a Council elected annually by its subscribing members.

Professor T. H. Huxley took the chair at the initial meeting held in the rooms of the Royal Society and was elected the first President. Among those present were Sir John Lubbock (afterwards Lord Avebury), Sir Joseph Hooker, Professor H. N. Moseley, Mr G. J. Romanes, and Sir E. Ray Lankester who, after Professor Huxley, was for many years president of the Association. It was decided to build a laboratory at Plymouth, where a rich and varied fauna is found.

The Plymouth Laboratory was opened in June 1888, and, since that date, considerable additions have been made to the buildings, including a library, lecture-hall, and extensive laboratory accommodation with up-to-date equipment. Additional sea-water reservoirs have also been built, and an aquarium, modernized in 1959, opened to the public.

Since its foundation the Association has been supported by subscriptions and donations from private members, universities, learned societies, the Fishmongers' Company and other public bodies. For some time past, however, the main financial support for the work of the Plymouth Laboratory has come from Government funds, and since 1965 the Laboratory has been grant-aided through the Natural Environment Research Council.

The Marine Biological Association, under the direction of its Council, undertakes research in all branches of marine science and the main results are published in this journal. Accounts of the laboratory and aquarium are to be found in Vol. 27 (p. 761), Vol. 39 (p. 391) and Vol. 43 (p. 281), and summaries of the activities and research of the Association are given annually in the Report of the Council in the November issue of the Journal.

The laboratory is open throughout the year and its work is carried out by a fully qualified research staff under the supervision of the Director. The names of the members of the staff will be found on the inner page of the front cover. Accommodation is available for British and foreign scientific workers who wish to carry out independent research in all branches of marine science. Arrangements are made for courses for advanced students, and marine animals and plants are supplied to educational institutions.

Work at sea is undertaken by three research vessels and by a motor boat, and these also collect the specimens required in the laboratory.

## TERMS OF MEMBERSHIP

	£
Annual Members, receiving the Journal . . . per annum	15.00
Annual Members, without the Journal . . . per annum	3.00
Founders . . . . .	100.00
Governors . . . . .	500.00

Annual subscriptions become due on 1 January.

Members of the Association have the following rights and privileges: they elect annually the Officers and Council; they are entitled to receive the Journal of the Association at a reduced rate; they are admitted to view the laboratory at Plymouth; they have the first claim to rent a place in the laboratory for research, with use of tanks, boats, etc.; they have the privilege of occupying a table for one week in each year free of charge; and they have access to the books in the library at Plymouth during working hours.

The Commissioners of Inland Revenue have approved the Association for the purposes of Section 16, Finance Act, 1958, and that the whole of the annual subscription paid by a member who qualifies for relief under the section will be allowable as a deduction from his emoluments assessable to income tax under Schedule E.

All correspondence should be addressed to the Director, The Laboratory, Citadel Hill, Plymouth, PL1 2PB.
