Cover photograph: Arctic Tern *Sterna paradisaea* makes exceptional long-distance movements offshore or along western continental coastlines between its high Arctic breeding grounds and Antarctic wintering grounds. It has been recorded from over 100 countries and thus its future will be secure only through widespread conservation action. It is a fitting symbol for the BirdLife International Partnership which, by working together, aims to improve the quality of life for birds, for other wildlife (biodiversity), and for people.
