

New Zealand Journal of Agricultural Research

The New Zealand Journal of Agricultural Research (NZJAR), a primary research journal which has existed for 35 years, is recognised internationally for quality of scientific content and presentation. New Zealand is well-known as a world leader in agricultural developments, and the Journal plays an important role in disseminating this information to researchers in universities, research institutes, and other centres concerned with animal and pastoral science. The Journal is therefore an integral and vital part of the development of agricultural science world-wide.

Scope

NZJAR publishes original research papers and review articles on all aspects of animal and pastoral science relevant to temperate and subtropical regions. Papers on insect pests, fertilisers, soil science, plant pathology, management systems, weeds, agricultural economics, forage crops, and invertebrates dealing with pastoral and animal production are also published in this Journal.

Papers published or under consideration elsewhere will not be accepted, but publication elsewhere of an abstract or extended summary does not preclude publication in full in this journal. In this context, restricted circulation of reports or theses does not constitute publication.

Editor Mrs Gill Sutherland
