Contents

	Preface		*page* xi
1	**Classical kinks**		1
	1.1	Z_2 kink	2
	1.2	Rescaling	6
	1.3	Derrick's argument	6
	1.4	Domain walls	7
	1.5	Bogomolnyi method for Z_2 kink	7
	1.6	Z_2 antikink	8
	1.7	Many kinks	9
	1.8	Inter-kink force	10
	1.9	Sine-Gordon kink	12
	1.10	Topology: π_0	14
	1.11	Bogomolnyi method revisited	17
	1.12	On more techniques	18
	1.13	Open questions	19
2	**Kinks in more complicated models**		20
	2.1	$SU(5)$ model	21
	2.2	$SU(5) \times Z_2$ symmetry breaking and topological kinks	22
	2.3	Non-topological $SU(5) \times Z_2$ kinks	26
	2.4	Space of $SU(5) \times Z_2$ kinks	27
	2.5	S_n kinks	28
	2.6	Symmetries within kinks	29
	2.7	Interactions of static kinks in non-Abelian models	31
	2.8	Kink lattices	32
	2.9	Open questions	34
3	**Interactions**		35
	3.1	Breathers and oscillons	35
	3.2	Kinks and radiation	38

Published online by Cambridge University Press

3.3 Structure of the fluctuation Hamiltonian 39
3.4 Interaction of kinks and radiation 40
3.5 Radiation from kink deformations 42
3.6 Kinks from radiation 45
3.7 Scattering of kinks 45
3.8 Intercommuting of domain walls 48
3.9 Open questions 48
4 Kinks in quantum field theory 50
4.1 Quantization of kinks: broad outline 51
4.2 Example: Z_2 kink 58
4.3 Example: sine-Gordon kink 60
4.4 Quantized excitations of the kink 62
4.5 Sign of the leading order correction 63
4.6 Boson-fermion connection 65
4.7 Equivalence of sine-Gordon and massive Thirring models 67
4.8 Z_2 kinks on the lattice 70
4.9 Comments 70
4.10 Open questions 71
5 Condensates and zero modes on kinks 73
5.1 Bosonic condensates 74
5.2 Fermionic zero modes 76
5.3 Fractional quantum numbers 81
5.4 Other consequences 82
5.5 Condensates on $SU(5) \times Z_2$ kinks 84
5.6 Possibility of fermion bound states 88
5.7 Open questions 89
6 Formation of kinks 90
6.1 Effective potential 90
6.2 Phase dynamics 93
6.3 Kibble mechanism: first-order phase transition 95
6.4 Correlation length 97
6.5 Kibble-Zurek mechanism: second-order phase transition 101
6.6 Domain wall network formation 105
6.7 Formation of $S_5 \times Z_2$ domain wall network 107
6.8 Biased phase transitions 110
6.9 Open questions 112
7 Dynamics of domain walls 113
7.1 Kinks in $1 + 1$ dimensions 113
7.2 Walls in $3 + 1$ dimensions 116
7.3 Some solutions 118

Published online by Cambridge University Press

7.4 Solutions in field theory: traveling waves 125
7.5 Spherical domain walls: field theory 126
7.6 Kink lattice dynamics (Toda lattice) 126
7.7 Open questions 127
8 Gravity and cosmology of domain walls 128
8.1 Energy-momentum of domain walls 128
8.2 Gravity: thin planar domain walls 129
8.3 Gravitational properties of the thin planar wall 130
8.4 Gravity: thick planar wall 132
8.5 Topological inflation 133
8.6 Spherical domain wall 134
8.7 Scalar and gravitational radiation from domain walls 135
8.8 Collapse into black holes 136
8.9 Cosmological domain walls: formation 136
8.10 Cosmological domain walls: evolution 137
8.11 Evolution: numerical results 139
8.12 Evolution: analytical work 139
8.13 Cosmological constraints 141
8.14 Constraints on and implications for particle physics 142
8.15 Metastable domain walls 143
8.16 Open questions 146
9 Kinks in the laboratory 147
9.1 Polyacetylene 147
9.2 Josephson junction transmission line 149
9.3 Solitons in shallow water 152
9.4 Concluding remarks 152
9.5 Open questions 153
Appendix A Units, numbers and conventions 154
Appendix B $SU(N)$ generators 155
Appendix C Solution to a common differential equation 157
Appendix D Useful operator identities 159
Appendix E Variation of the determinant 162
Appendix F Summary of cosmological equations 163
References 165
