INSTRUCTIONS TO AUTHORS

Papers intended for publication should be submitted to Dr G. D. H. Bell, C.B.E., F.R.S., Plant Breeding Institute, Cambridge, or to one of the Associate Editors. It must be understood that, if accepted by the Editorial Board, the paper will not be published elsewhere in the same form.

MANUSCRIPTS. Papers, written in English, are accepted from any country and should be typed in double-spacing on one side of the paper with a margin at least 4 cm wide on the left-hand side. Authors should instruct typists on the style of manuscript required. A top copy and one carbon copy should be submitted.

TABLES must be self-explanatory. They should be typed on separate sheets, numbered consecutively and carry an appropriate title. Wherever possible, tables should be arranged so that they can be printed in the normal orientation of the text and without the need for rules.

LINE DRAWINGS (with photocopies) should be 25 cm. wide and drawn in black waterproof ink on Bristol board, graph paper with blue lines or tracing paper. Legends should be typed on a separate copy and numbering inserted lightly and clearly in soft pencil on the drawing. Tables and figures should not reproduce the same data.

The approximate position of tables and figures should be noted in the text.

PLATES should make a definite contribution to the value of the paper and the number submitted should be kept to a minimum. They should be good quality, unmounted, glossy prints and be lightly numbered in pencil on the reverse side. If several, or coloured, plates are submitted the author may be asked to contribute to the cost of reproducing them.

TITLE. The title must be specific and suitable for indexing by the mechanical methods now being employed. The full name and address of the institution in which the research has been carried out should be stated. Change of address may be given as a footnote. A short title, not exceeding 50 characters, should be provided for the running headlines.

STYLE. Experimental details and results should be recorded in the past tense and there should be no unnecessary repetition or loose phrases. Manuscripts are likely to be returned for modification if the presentation is not clear and precise.

LAYOUT. Authors are recommended to study '*General Notes on the Preparation of Scientific Papers*'

(Royal Society, London, 2nd edn., 1965). The Editorial Board do not insist upon a rigid format but it is usually convenient to divide the paper into sections, e.g. Introduction, Materials and Methods, Results and Discussion. An excess of headings and sub-headings should be avoided. A Summary should always be included.

Authors are advised to note the following points: a detailed review of literature is not necessary; relevant details should be given of the plant or animal material, the experimental design and chemical or other techniques employed; mean results with their relevant standard errors should be presented rather than detailed data; the statistical methods used should be clearly stated; the discussion should relate the author's experiments to other work on the subject and give the author's conclusions; the summary should be factual and suitable for use in abstracting journals. Footnotes should be avoided.

REFERENCES. The bibliography must be given in the form—Surname of authors, initials, year of publication (in parentheses), title of paper, name of journal (abbreviated according to the *World List of Scientific Periodicals*, 4th edn, Butterworths, London), volume and pages of reference. References should be in alphabetical order. In the text a reference should be quoted by the author's name and date (in parentheses). Where there are more than two authors, the initial reference in the text should include the names of all authors but subsequent citations, should be in the form—first author followed by *et al.* Authors should check that all references in the text appear at the end of the paper and vice versa, and that names and dates correspond in the two places.

PROOF CORRECTION. Standard proof correction marks (British Standard 1219) should be made as legibly as possible in ink, not pencil. Directions to the printer which are not to be set up in type should be encircled. Captions to illustrations and all references should be checked. Queries marked by the printer should be answered. Proofs are provided in order that authors can check the correctness of the type-setting—excessive alterations may be charged to the author.

OFFPRINTS. Contributors will receive 25 copies of their papers free and can order others when they receive the proofs.

Failure to comply with the 'Instructions to Authors' may delay publication.

Vapona will clear insects from any size glasshouse easily and safely

Vapona, Shell's latest insecticide, vaporises — whether you spray, fog or sprinkle it. The vapour spreads effectively up to 100 feet from its point of release, probing into cracks and crevices to search out and kill all types of insects (even resistant strains). Yet Vapona, which is DDVP based, breaks down rapidly into harmless substances on surfaces and in the presence of moisture. And the minute dosage required to destroy insects causes no harm or discomfort to humans or animals. Vapona is highly suitable for use in glasshouses (where it easily controls white flies and aphids) as well as in warehouses, restaurants, cinemas, abattoirs, food processing plants, and garbage dumps. Vapona is just one of Shell's comprehensive group of pesticides, which includes aldrin, dieldrin, endrin, Phosdrin, D-D and Nemagon.

Shell Chemicals

For further information and details of Shell's technical services, please consult your Shell Company.

ANIMAL PRODUCTION

JOURNAL OF THE BRITISH SOCIETY OF ANIMAL PRODUCTION

Contents of Volume 8, Part 3, October 1966 include

- JONES, MADDEVER, COURT and PHILLIPS. The time taken by cows to eat concentrates.
- BICHARD and COOPER. Analysis of production records from a lowland sheep flock: 1.
- MOAV. Specialized sire and dam lines. III: Choice of the most profitable parental combination.
- MOAV and HILL. Specialized sire and dam lines. IV. Selection within lines.
- BROADBENT and WATSON. Factors governing the shape of the growth curve of Suffolk x Welsh lambs.
- WIESER, PRESTON and MACDEARMID. Intensive beef production. 8. The effect of chlortetracycline on barley beef cattle.
- HINKS. Selection practices in dairy herds. I and II.
- DOORNENBAL and MARTIN. The association between commercial cut-out yield and gross chemical composition in market pigs.
- LODGE, ELSLEY and MACPHERSON. The effects of level of feeding of sows during pregnancy. II.
- ELSLEY, ANDERSON, McDONALD, MACPHERSON and SMART. A comparison of the live-weight changes, nitrogen retention and carcass composition of pregnant and non-pregnant gilts.
- SLEE. Variation in the responses of shorn sheep to cold exposure.
- HUNTER. The effect of superovulation on fertilization and embryonic survival in the pig.

The Journal is published three times a year, but **COMMENCING 1967 WILL BE PUBLISHED QUARTERLY IN FEBRUARY, MAY, AUGUST and NOVEMBER.**

The 1966 annual subscription rate is 65s. (U.S.A. \$11.00), single copy 25s. (U.S.A. \$4.00). **COMMENCING 1967 THE SUBSCRIPTION RATE WILL BE 90s. (U.S.A. \$14.00).** Orders and subscriptions may be sent to any bookseller or direct to:

CROP SCIENCE

Crop breeders, plant geneticists and physiologists, and workers in related areas will find *Crop Science* a source of valuable articles in their branches of science. This bimonthly journal carries reports of research in the genetics, physiology, ecology, breeding and management of field crops, turf-grasses, pastures and ranges, and in seed technology. It is published by the Crop Science Society of America.

\$16.00 per year in U.S. and Canada.
\$17.00 per year elsewhere.
