## COOPER'S PATENT COAL-LIMING PROCESS.

**T**HIS Process has now been in continuous operation at TUNBRIDGE WELLS for nineteen months, the make of Gas being about 120,000,000 feet per annum.

Practically, all the work of purification has been done by a SINGLE PURIFIER, which, at the end of thirteen months, was opened and emptied, one half only of the Oxide being at once returned to it (the object being to allow more space for its expansion), and the other half returned into Store for future use.

The quantity originally used in the box was 30 tons, which was reduced to 15, and the expense of the operation was £3: this is the only expense incurred in the purifying-house in the last nineteen months.

The Gas has been kept well within the now common Parliamentary requirement of 20 grains of Sulphur Compounds in 100 feet.

Recent experience has shown that with Coal containing about twice the usual quantity of Sulphur the Sulphur Compounds will be increased proportionally, and the simple remedy of increasing the percentage of Lime used in the retorts has been found effectual in reducing them to the normal quantity of from 8 to 12 grains in 100 feet.

The air in the immediate vicinity of the Establishment is as pure as if the Works were non-existent, which, as a Sanitary result, is a great boon to the inhabitants living in the valley and on the adjacent hills, who were formerly annoyed by the disagreeable smells which floated in the atmosphere every time a foul lime purifier was opened and emptied; an operation of very frequent occurrence under the old system.

The PRODUCTION of AMMONIA has been increased more than 30 per cent.; which has to that extent made up for the reduced market value of that product.

The CALORIFIC VALUE of the COKE is greater than that produced from unlimed Coal, and this has been felt in reducing the quantity used on the Works for fuel, and in the increased demand, which has been experienced in a marked degree.

The COOPER COAL-LIMING PROCESS should be heartily welcomed by the Proprietors and Managers of all small Gas Works where the purifying plant is not equal to present requirements; because, by its adoption, immediate relief would be afforded without the outlay otherwise unavoidable upon increasing the area of the Purifiers.

NO PREPARATION NOR OUTLAY OF ANY KIND is needed for the introduction of the process into any Gas Works.

Address:—Coal Distillation Co., Limited, 18, Finsbury Circus, E.C.

SECRETARY—MR. SAMUEL GRIGG.
