

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc> .

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using AMS-TEX . Authors who are able to do so are invited to prepare their manuscripts using TEX . (We accept Plain TEX , AMS-TEX or LATEX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Interpolating sequence on certain Banach spaces of analytic functions	
B. Yousefi	177
Parallel surfaces in the real special linear group $SL(2, R)$	
Mohamed Belkhef, Franki Dillen and Jun-ichi Inoguchi	183
Amenability and topological centres of the second duals of Banach algebras	
F. Ghahramani and J. Laali	191
Hausdorff dimension of the limit set on a visibility manifold	
Hyun Jung Kim	199
A characterisation of simple groups $PSL(5, q)$	
A. Iranmanesh and S.H. Alavi	211
Weakly compact sets and smooth norms in Banach spaces	
Marián Fabian, Vicente Montesinos and Václav Zizler	223
An explicit Hecke's bound and exceptions of even unimodular quadratic forms	
Kok Seng Chua	231
Restriction of Siegel modular forms to modular curves	
Cris Poor and David S. Yuen	239
A remark on the derivative of the one-dimensional Hardy-Littlewood maximal function	
Hitoshi Tanaka	253
On a class number formula for real quadratic number fields	
David M. Bradley, Ali E. Özlük and C. Snyder	259
On \mathcal{F}-residuals of finite groups	
Wenbin Guo, K.P. Shum and A.N. Skiba	271
Transversals in permutation groups and factorisations of complete graphs	
Gil Kaplan and Ariele Lev	277
Invexity of supremum and infimum functions	
Nguyen Xuan Ha and Do Van Luu	289
Usco selections of densely defined set-valued mappings	
Warren B. Moors and Sivajah Somasundaram	307
Hausdorff dimension of random fractals with overlaps	
Z.G. Yu, V.V. Anh and K.S. Lau	315
Free surface waves over a depression	
J.W. Choi	329
Multipliers on weighted function spaces over locally compact Vilenkin groups	
Yueping Zhu	337
