In recent years, inflation has come to be considered as a permanent, possibly a necessary characteristic of a modern, open-market economic system, until the combined effect of old with apparently new problems has produced a much too strong pressure on the system and caused a disruptive process, in which many factors, sometimes of opposite sign, have been at work. All productive sectors have been affected, but not all in the same way nor to the same extent. In a few instances, the crisis has been beneficial; in many more, positive factors have partly counteracted the negative ones.

The publishing sector appears to have only
