
BUSINESS TRENDS

THE COURSE OF INDUSTRIAL DECLINE

THE BOOTT COTTON MILLS OF LOWELL, MASSACHUSETTS, 1835-1955

Laurence F. Gross

Studies of American industry frequently cite Lowell as an early model for business practices. They have sought to explain Lowell's rise to prominence, the impact of its textile mills on workers and on commerce, and its part in regional development and American prosperity. Laurence Gross looks beyond these issues to examine the industry's struggle to maintain its prominence, the causes of its decline, and its ultimate flight south.

BUSINESS HISTORY TITLES FROM

The Great Myths of 1929 and the Lessons to Be Learned By Harold Bierman, Jr.

"It provides an excellent example of how to analyze events in the context of the information that was available to people at the time . . . students of financial economics deserve better, and Harold Bierman has delivered it."

The Journal of Finance

Greenwood Press. 1991. 208 pages.
0-313-27365-0. \$42.95.

Visionary Capitalism Financial Markets and the American Dream in the Twentieth Century By Charles R. Geisst

Arguing that the American Dream finds its best tangible expression in the ways in which the financial markets have been used to foster and protect the ideals of quality housing, higher education, and agricultural production, the author analyzes the successes and failures of the markets in producing a high standard of living and well-being over the past 70 years.

Praeger Publishers. 1990. 216 pages.
0-275-93283-4. \$45.00.

Workers at Risk The Failed Promise of the Occupational Safety and Health Administration By Thomas O. McGarity and Sidney A. Shapiro

Examines shortcomings and proposes improvements in OSHA, the Occupational Safety and Health Administration.

Praeger Publishers. 1993. 376 pages.
0-275-94281-3. \$59.95.

Entrepot Capitalism Foreign Investment and the American Dream in the Twentieth Century By Charles R. Geisst

This history on foreign investment in the U.S. after 1920 shows how the U.S. changed from a debtor nation to a supplier of capital to the rest of the world, and then details the structural shifts in this creditor position after the breakdown of the Bretton Woods system in 1972.

Praeger Publishers. 1992. 184 pages.
0-275-93894-8. \$39.95.

International Business History A Contextual and Case Approach By Dennis M.P. McCarthy

Presents the history of international business using a case and contextual approach. Case studies from around the world are analyzed in their internal and external contexts.

Praeger Publishers. 1993. 0-275-94413-1.
\$50.00 Est.

Before the Computer

IBM, NCR, Burroughs, and Remington Rand
and the Industry They Created, 1865-1956

James W. Cortada

Before the Computer fully explores the data processing industry in the United States from its nineteenth-century inception down to the period when the computer became its primary tool. James Cortada challenges our view of the digital computer as a revolutionary technology. He sees computers as a development within an important segment of the American economy that was earlier represented by such instruments as typewriters, tabulating machines, adding machines, and calculators.

Drawing on previously unavailable industry archives, the author adds to our understanding of IBM's early history and offers short corporate histories of firms that include NCR, Burroughs, and Remington Rand.

"Well-researched, well-written histories of American industries . . . are all too few. So this history of the U.S. data-processing industry before the computer is most welcome."

—Alfred D. Chandler, Jr., *Harvard University*

". . . will serve as a useful reference for historians and others interested in the computer industry."—Steven Lubar, *The National Museum of American History, Smithsonian Institution*

Princeton Studies in Business and Technology; David Hounshell, Editor

Cloth: \$55.00 ISBN 0-691-04807-X

Sovereignty and an Empty Purse

Banks and Politics in the Civil War

Bray Hammond

A sequel to his Pulitzer Prize-winning *Banks and Politics in America from the Revolution to the Civil War*, this book by Bray Hammond focuses on how Washington struggled financially to settle the Civil War and how its measures spurred the growth of federal government.

"Hammond writes engagingly and his work is a happy blend of diligent research and spirited recitals. . . . We have here an excellent account of the evolution toward a uniform paper currency based on Federal credit and a national banking law."—*The Bankers Magazine*

Winner of the Phi Beta Kappa Award in Science **The Computer from Pascal to von Neumann**

Herman H. Goldstine

In 1942, Lt. Herman H. Goldstine, a former mathematics professor, was stationed at the Moore School of Electrical Engineering at the University of Pennsylvania. It was there that he assisted in the creation of the ENIAC, the first electronic digital computer. After World War II, at the Institute for Advanced Study, Goldstine, John von Neumann, and others built the prototype of the present-day computer.

Goldstine writes as both historian and scientist in this first examination of the development of computing machinery, from the seventeenth century through the early 1950s. His personal involvement lends a special authenticity to his narrative, as he sprinkles anecdotes and stories liberally through his text.

"Herman Goldstine is himself a pioneer of the computer. . . [He] writes with disarming candor and good humor."—*Scientific American*

GUIDELINES FOR CONTRIBUTORS

General Information

Manuscripts are considered for publication on the understanding that they are not concurrently under consideration elsewhere and that the material—in substance as well as form—has not been previously published.

Three copies of the manuscript should be submitted.

Authors should identify themselves only on a separate title page that provides name, mailing address, and telephone number. Authors must also remember not to identify themselves in the body of the manuscript; specifically, references to their own work in the text should be in the third person, and citations should be written without possessive pronouns—not “See my. . . .”

Each article should be accompanied by a précis of 75-100 words outlining the main point(s) of the paper and placing the article in context. Subheads should be used to divide the manuscript into three or four sections (or more, depending on length).

We do not have an upper or lower page limit, but articles usually run between 25 and 60 typescript pages, including notes and other material.

Articles must contain notes in the humanities style, not references as in the social sciences.

We are always eager to publish illustrations, but authors should not include originals of illustrative materials at the time of submission; photocopies of such material may be included.

Authors of accepted manuscripts will receive two copies of the issue in which the article appears and twenty-five free offprints.

Manuscript Preparation

ALL material—including extracted quotations and notes—must be double-spaced. Legible photocopies or word-processed originals may be submitted. Use of dot-matrix printers is discouraged.

Notes should be numbered consecutively and citations should be placed at the end of the text. Do not place footnotes at the bottom of the page (see word-processing instructions).

Each table or figure should occupy a separate page and should be numbered (in arabic numerals) and grouped together between the text and the notes. The position of these items should be indicated in the text (as, “see Table 3”), but they should not be mingled with the text and no extra space should be left for them there. Each table and figure must be accompanied by a complete source.

We use the 13th edition of *The Chicago Manual of Style* (1982) and spell and hyphenate words according to Webster's *Ninth New Collegiate Dictionary*.

The journal encourages authors to use gender-neutral prose in all cases where it is not anachronistic to do so; male nouns and pronouns should not be used to refer to people of both sexes.

We use the day-month-year form for dates, as 11 February 1990.

Double quotation marks should be used for journal titles and direct quotation; single quotation marks are used for quoted material inside quotations.

Sample Citation Forms:

Book: Alfred D. Chandler, Jr., *The Visible Hand: The Managerial Revolution in American Business* (Cambridge, Mass., 1977), 321–22.

Journal: Charles Cheape, “Not Politicians but Sound Businessmen: Norton Company and the Third Reich,” *Business History Review* 62 (Autumn 1988): 444–66.

Note that we do not include the publisher in book citations. We do not use *loc. cit.*, *op. cit.*, or *idem.*, but *ibid.* (not italicized) may be used.

Word-Processing Guidelines

The journal can accept disks of all standard sizes and densities, but they must be formatted in MS-DOS; we cannot use Apple or MacIntosh software. WordPerfect is directly compatible, but we may be able to accept your document if it can be converted into an ASCII file.

Potential contributors should submit hard copy, not diskettes, initially, but it will save considerable work for all parties in the event of acceptance if authors working on PCs follow a few rules from the beginning:

In general, use as few formatting commands as possible.

Do not justify or half-justify the right-hand margin.

Do not hyphenate words at the end of lines.

Do not use hard returns except for new paragraphs or required page ends except as absolutely necessary (for example, to break between text and notes).

Do not use special fonts; underline material that is to be set in italics.

Most important, do not use the word processor's automatic footnote functions: do not embed notes in the text. Notes should be keyed in at the end of the text (after any tables) or as a separate file.
