

# Microscopy<sup>AND</sup> Microanalysis

table of contents preview

## Thick and Thin Films: Standards and Analysis

Characterization of SiGe Films for Use as a National Institute of Standards and Technology Microanalysis Reference Material (RM 8905)

by Ryna B. Marinenko, Shirley Turner, David S. Simons, Savelas A. Rabb, Rolf L. Zeisler, Lee L. Yu, Dale E. Newbury, Rick L. Paul, Nicholas W.M. Ritchie, Stefan D. Leigh, Michael R. Winchester, Lee J. Richter, Douglas C. Meier, Keana C.K. Scott, Donna Klinedinst, and John A. Small

Electron-Beam-Induced Carbon Contamination on Silicon: Characterization Using Raman Spectroscopy and Atomic Force Microscopy

by Deborah Lau, Anthony E. Hughes, Tim H. Muster, Timothy J. Davis, and A. Matthew Glenn

Electron Probe Microanalysis of Thin Films and Multilayers Using the Computer Program XFILM

by Xavier Llovet and Claude Merlet

## Biological Imaging: Techniques Development and Applications

Colloidal Palladium Particles of Different Shapes for Electron Microscopy Labeling

by Daryl A. Meyer, Julie A. Oliver, and Ralph M. Albrecht

Cryomesh™: A New Substrate for Cryo-Electron Microscopy

by Craig Yoshioka, Bridget Carragher, and Clinton S. Potter

Three-Dimensional Scanning Transmission Electron Microscopy of Biological Specimens

by Niels de Jonge, Rachid Sougrat, Brian M. Northan, and Stephen J. Pennycook

Visualization of Localization Microscopy Data

by David Baddeley, Mark B. Cannell, and Christian Soeller

Fractal and Image Analysis of the Microvasculature in Normal Intestinal Submucosa and Intestinal Polyps in *Apc<sup>Min/+</sup>* Mice

by John W. Fuseler, Adam Bedenbaugh, Krishna Yekkala, and Troy A. Baudino

Neural Differentiation of Human Embryonic Stem Cells at the Ultrastructural Level

by Jennifer L. Mumaw, Dave Machacek, John P. Shields, Mahesh C. Dodla, Sujoy K. Dhara, and Steve L. Stice

A Layered Structure in the Organic Envelopes of the Prismatic Layer of the Shell of the Pearl Oyster *Pinctada margaritifera* (Mollusca, Bivalvia)

by Y. Dauphin, A. Brunelle, M. Cotte, J.P. Cuif, B. Farre, O. Laprèvote, A. Meibom, M. Salomé, and C.T. Williams

## Atom Probe Tomography

Spatial Resolution in Atom Probe Tomography

by Baptiste Gault, Michael P. Moody, Frederic de Geuser, Alex La Fontaine, Leigh T. Stephenson, Daniel Haley, and Simon P. Ringer

## Book Review

*Transmission Electron Microscopy: A Textbook for Materials Science*, Second Edition. David B. Williams and C. Barry Carter  
by Stephen J. Pennycook

## Calendar of Meetings and Courses

Microscopy and Microanalysis website:

Indexed in Chemical Abstracts, Current Contents, BIOSIS, and MEDLINE (PubMed)

MSA members receive both *Microscopy Today* and *Microscopy and Microanalysis* FREE!

## Dear Abbe

Dear Abbe,

*We are having a bizarre scanning problem. Straight vertical lines in an object become slightly zigzagged with a period of up to 6-7 scan lines, and there also may be some oscillation in the intensity. Apparently it doesn't seem to be the scanner controller or the galvo mechanism. It does not seem to be the electric power in the building nor is it a mechanical vibration. It is not a computer or cables. It is not a 60 Hz noise. We've sent the instrument off to the manufacturer, but it doesn't have a problem at their facility. We suspect that we have a poltergeist. Can you help us?*

Mike in Kent

## Dear Ghost Hunter,

Most central labs are inhabited by specters, ghouls and Wissenschaftgeists. Sometimes these take the form of ethereal vapors, much as you describe. Other times they are simply senior administrators or former mistresses who wait for you in the parking lot with cans of pepper spray. In dealing with all things paranormal, I often call on my dear friend Madame Dikroic. She's no Brandy Green, but she has more experience in appeasing apparitions than the Detroit Lions have at losing games. Modern instruments have extra space where the engineers couldn't cram another wire and this is where these mischievous spirits reside. The possessed equipment will behave in unusual ways—not working at inopportune moments, deleting large amounts of data, or emitting a high-pitched whining noise that sounds eerily like Abba. One solution is to mix jimson weed with sulfur and honey. The mixture is placed in a small bowl made of Snake Wood, which has been rubbed against a black cat, and then the mixture is slowly sipped. If mixed with about 500 cc of Schönauer Apfel Schnapps, you will no longer notice the aberrant scan lines or hear "Dancing Queen" in your head.

*Having trouble sleeping at night worrying about technique? Can't seem to find the right words to say to your technicians? Let Abbe have a whack at it. What could go wrong? Send your posers to his assistant at [jshields@cb.uga.edu](mailto:jshields@cb.uga.edu).*

Let 4pi take you beyond the capability of any SEM/STEM on the market with

# RevolutionEDX™

X-ray Microanalysis Systems

*Save time and production costs  
with 4pi's unique features*

Features available exclusively from 4pi:

Event-Streamed Spectrum Imaging\*  
and  
Spatial Frame Lock\*

Real-time electron-beam drift correction

Silicon-drift detectors offering  
129eV or better resolution

& super-ultra-fast spectrum imaging

- Work over a network via Gigabit Ethernet
- Easy to use: one-click acquisition for spectra, images, maps, spot probes and line scans
- **Dynamic Dwell Modulation\*** – spend maximum time on areas of interest while continuing to obtain x-ray data from the entire area
- Robust auto peak-ID based on real-time full deconvolution of acquired x-ray spectra
